

thing. iOS 17 is more customisable than ever before with Widgets and Lock Screen customisation options, however, true customisability does still come on the side of Android. All in all, though, the iPhone 15 Plus is a powerhouse; capable of pretty much anything you throw at it.

CAMERAS

The iPhone 15 Plus has finally ditched the 12-megapixel sensor and replaced it with a 48-megapixel shooter that snaps 24-megapixel shots by default. You also get improved dynamic range and this has finally addressed some of the less-than-ideal HDR abilities of the previous-gen models. There's also a 2x sensor crop zoom that is pretty close to optical quality. You can't shoot in 48 MP ProRaw though, that is limited to the Pro models.

Pictures out of the primary camera look rich and sharp in daylight. It provides outstanding results in pretty much all conditions including tricky lighting, where it does a great job of exposing highlights and shadows in a balanced way. The colours look very natural as well. Portraits, as expected, look excellent. The edge detection is par excellence, colours are natural, and the pictures are sharp and detailed overall. The new iPhones have even started capturing portrait depth data for pictures of human subjects and pets, so if you click a normal photo and wish to turn it into a portrait one, you can do that after the fact.

Ultrawide photos from the 12-megapixel camera look almost as good as photos from the main camera. Low-light pictures from both cameras come out looking fantastic and detailed. In fact, low-light portraits are possibly the best in the market right now. The selfie camera also provided some great results in both daylight and low light. Details on the face are well-maintained and colours look realistic. There's no aggressive smoothening of textures as well.

Coming to video, you can record up to 4K at 60 fps and the footage looks slick. Video footage from the phone is rich in details, there's no choppiness whatsoever, and transitions between different zoom levels are seamless. You can also choose to shoot in Cinematic Mode.

BATTERY LIFE

The iPhone 15 Plus has reached ridiculous levels of battery life. It has, by far, the longest battery life of any iPhone to date that we've tested. The phone houses a 4,383 mAh battery and supports 20 W charging. You also get support for 15 W wireless MagSafe charging and 7.5 W Qi wireless charging.

I put the iPhone 15 Plus through our usual slew of battery tests and

devices. At a starting price of ₹89,900, the iPhone 15 Plus boasts some of the best performance, camera, and battery chops in the industry at the moment. Although the chipset has stayed the same as the 14 Pro Max, I saw enough of a performance uptick to recommend this phone over the iPhone 14 Pro to most users if they're okay with missing out on the telephoto lens. You've also got meaningfully Pro-level

AGENT 001's thoughts

"The iPhone 15 Plus is not just a phone, it's a high-tech Swiss Army knife for your digital life, with the battery life of a marathon runner and the camera skills to make even your selfies look like masterpieces! Despite whatever Android fanboys say, this phone is still worth checking out."

it outshone every flagship of 2023. In our usual 4K video loop test, the iPhone 15 Plus clocked in an impressive runtime of 21 hours and 22 minutes. I was consistently getting about 8-9 hours of on-screen time in my daily usage which consisted of gaming, social media, WhatsApp, email, and using the camera. If battery life is your primary concern, the iPhone 15 Plus has your back. However, the slow 20 W charging speeds are a bummer. The phone takes more than 1.5 hours to charge from empty to full, which is essentially as good as charging at a snail's pace in 2023.

VERDICT

The iPhone 15 Plus is one of the most well-rounded Apple phones of recent years – it gives you enough to justify its exorbitant price but not too much to take away from the allure of the Pro

upgrades such as the fantastic camera setup, the battery life, and the solid performance. The software experience is as polished as ever, and the new design brings some level of premium air to the vanilla iPhones.
