

Samsung Galaxy Watch 6

An impressive smartwatch in almost every respect

Satvik Pandey | satvik@digit.in

The Samsung Galaxy Watch 6 Classic is the latest addition to the brand's wearable lineup, headlining the Galaxy Watch 6 lineup that is the successor to the very popular Watch 5 lineup that was launched last year. While I did not get a chance to play around with the older Watch 5 Classic, when the Watch 6 Classic showed up at the Digit Test Labs, I wasted no time and got my hands on the watch or the watch on my hands ;-). Whatever. The watch comes with a host of improvements over its predecessor, many of which I covered in my reel posted on Digit's Instagram and YouTube channels. These include an improved rotating bezel, better and more personalised health tracking features, and a faster CPU to name a few.

I did spend my fair share of time with the Samsung Galaxy Watch 6 Classic,

handing it to my peers at the Test Labs and getting their views, all of which have been put into this article. So, read on to find out whether the Samsung Galaxy Watch 6 Classic makes for a good purchase at ₹43,999 for the top-of-the-line 46mm LTE variant!

Build and design take charge!

The Samsung Galaxy Watch 6 Classic is a looker. With its stainless steel case, a watch face that could be (in my opinion) the literal definition of class, and a strap which looks awesome in its pastel colourway, it makes for a watch that I could easily pair with most of my outfits for a variety of occasions. The way Samsung has played around with the brushed and glossy finish on the watch face is something that I loved. The legend on the rotating bezel is sometimes hard to read, but if you are someone who is trying to keep it low-key, I guess that helps.

The strap uses a soft-to-touch silicon finish on the inside, which touches your skin, with a leatherette inlay on the front and a stitch running along the edge of the strap. Even when I was sweating during my runs, wearing the

watch was a comfortable experience overall. The number of holes on the strap that came factory-fitted on the watch was also fine for most people in the Test Labs. Talking about the strap, the replacement is super easy, and you can get additional straps to change the look of the watch without much hassle.

Now, if you have a lean wrist, please go for the smaller 42mm variant because the round dial will look massive on your wrist. Or you can go for the regular Samsung Galaxy Watch 6. Now, if you are a fan of that chunky look, then definitely go for the Watch 6 Classic! As for the weight of the watch, it came in at 85 grams, with the strap attached.

Coming to the materials on the watch's body and face, the stainless steel that was used to make the watch case, as expected, held up well against all the (minor) bumps. As for the crystal on the watch face, Samsung has labelled it to be a sapphire crystal glass. When using the watch, it did not pick up any scratches on the screen, and I don't think, until you are intentionally doing activities that will scratch the watch face, it should be a problem for you in the long run.

But, for the one-off situations, especially when you are outdoors when the watch might get exposed to certain conditions which are not favourable at all, I would recommend you put on a scratch guard on it. A case is not warranted, as the stainless steel will be able to withstand almost everything you send its way.

Features and day-to-day use

As for the features in the Samsung Galaxy Watch 6 Classic, there are some inclusions which I cannot help but love, but there are some others which I did not find as mesmerising as the brand advertised them to be. Let's rip the band-aid right away and start with the ones I wasn't impressed with.

The first one is the bezel control. At times, I found the scrolling and other tasks that required me to use the bezel to be a bit out of sync. There were instances
