

The colour reproduction was also great for the naked eye. In some brightly lit scenes, I did notice a slight loss in detail of the background. I tried it over and over to verify my findings, and they stood the same. As I prefaced in the introduction, this is something that someone looking at it with a keen eye would notice. For most people looking at presentations or watching their shows on this projector, the loss of detail would not be a deal breaker. And, if you are unhappy with the colour reproduction of the projector, then you can use ViewSonic's vColour Tuner utility to make sure that you get the colour quality you like.

In terms of playing back HDR content, at least the kind that is provided by OTT services, the projector had no problems. The speakers, as claimed by ViewSonic, have been custom-built by Harman Kardon for this unit. And, being someone who has been working with sound systems for some time now, I was fairly impressed with what this projector brings to the table. If you are sitting right next to it or within like a 5 feet radius, you will not have to worry about the sound quality. The dialogues are clear, and the detail in the sound meant that it wasn't an issue watching a variety of content on this projector. The bass was a bit lacklustre in some scenarios, like explosions in movies, but considering the size of the package, I can give that a pass. The remote, with its backlit keys, also shined through.

While gaming, there was a bit of an input lag in games like F1 23, which require precise inputs. However, if you are someone who enjoys MMOs and RPGs, where that level of input lag can be considered passable for casual play, you will have very little to complain about.

SPECS AT A GLANCE

- Projection System: 0.65" 1080p
- Native Resolution: 1920x1080
- Brightness: 3100 (LED Lumens)
- Contrast Ratio: 3000000:1
- Display Color: 1.07 Billion Colors
- Light Source Type: LED
- Light Source Life (hours) with Normal Mode: 30000
- Lens: F=2.6-2.78, f=10.2-11.22mm
- Projection Offset: 105%+/-5%
- Throw Ratio: 0.69-0.83
- Optical Zoom: 1.2X
- Digital Zoom: 0.8x-2.0x
- Image Size: 60"-120"
- Throw Distance: 0.92m-2.2m (100"@1.53m)
- Keystone: H: +/-40° , V: +/-40°
- Audible Noise (Normal): 31dB
- Audible Noise (Eco): 27dB
- Local Storage: Total 16GB (11GB available storage)
- Input Lag: 8.3ms
- Resolution Support: VGA(640 x 480) to 4K(3840 x 2160)
- HDTV Compatibility: 480i, 480p, 576i, 576p, 720p, 1080i, 1080p, 2160p
- Horizontal Frequency: 15K-135KHz
- Vertical Scan Rate: 23-120Hz
- Connectivity-
HDMI: 2, USB Type C: 1, Audio-in (3.5mm): 1, Audio-in (Bluetooth): 1 (BT4.2), USB Type A: 1, Wifi Input: 1 (5Gn)

Should you buy this projector?

When you are spending around one and a half lakh rupees on a gadget, you will expect nothing short of the best that amount of money can get you. And the ViewSonic X2 as a package is just that. The features, build, and performance come together to make for a great deal for the price. If you are a hardcore gamer, look elsewhere. However, if you

are planning to make this projector a part of your home entertainment or conference room setup, then I do not think that you will have many issues with the X2. There are some offerings from brands like BenQ, ViewSonic themselves, and Optoma, which might entice you. However, considering the fact that this projector comes with its own sound system, the cost offset by that tilts the scales in favour of the X2. **👍**
