

A look into Future Factory with Mr. Jashish Kambli

Soham Raninga | soham@digit.in

A company that is in the business of making the future, that's a short description of Future Factory, right from the horses mouth. We caught up with Jashish Kambli the founder of Future Factory, a Mumbai based design and consulting company that helps brands engineer innovative products through the integration of design and technology.

Q What is Future Factory all about? Name suggests it has to do with manufacturing for the future, how true is Future Factory to its name?

Future Factory is a prominent global design and consulting firm that specializes in assisting brands in creating innovative products by seamlessly blending design and technology. As a highly acclaimed full-service studio, Future Factory takes a comprehensive approach, guiding projects from concept to delivery, with a strong commitment to user-centric design principles.

When the company was initially started in the mid-90s, the landscape of Indian manufacturing was rather isolated and not closely aligned with global best practices. To this day Future Factory continues to adhere to its original vision of delivering products and services that utilize the latest technologies to align with the changing needs of users and aspirations and demands.

Jashish Kambli
Founder, Future Factory

The company achieves this by thoroughly understanding the end user, harmonizing their needs with client capabilities, and ensuring feasibility at market-driven price points. Future Factory's extensive portfolio of groundbreaking and category-defining products attests to our dedication to living up to our name.

Q What led to the genesis of Future Factory?

The inception of Future Factory can be attributed to our primary objective to elevate the standards of design expectations in India. In 1996, recognizing that great design is the outcome of teamwork which is in itself an outcome of culture, Future Factory was established as an

innovation and design firm focused on advising brands regarding what to make and how best to design these products.

Over the course of a decade, we have expanded our influence by enhancing our capabilities. This includes the development of deep engineering expertise, the setting up of CBR, our inhouse Centre for Behavioural Research, the creation of a cutting-edge prototyping facilities and a large and diverse manufacturing ecosystem to support our innovations all the way to market.

Future Factory has evolved into a collaborative community encompassing a diverse range of exceptionally skilled and dedicated professionals.

This collective includes design researchers, strategists, product designers, engineers, brand specialists, UX/UI designers, developers, craftsmen, and more. Together, we form a wellspring of creativity and expertise, driven by a shared mission to produce world-class products tailored for developing markets.

Q What problem is the company trying to solve?

The challenge that Future Factory aims to address are very client and context specific.

It may entail a client grappling with intense competitive pressures, facing the threat of obsolescence due to disruptive startups or a scenario where a client, despite being a leader in their category, finds themselves at a plateau with limited avenues for growth.

Additionally, we also engage with established players looking to expand into adjacent categories as well as clients who possess advanced technology but lack the clarity on how to effectively apply it in a manner that resonates with the market overall. **d**
