

Google Bard update includes many improvements

Google has announced two new features for

Bard. The new features are better email summarisation and image sharing. For those who are unaware, Bard is an AI chatbot which Google launched earlier this year. Google has announced the new features on Bard's "Experiment updates" page. Google said that when you use the Workspace Extension, Bard can now summarise more emails. The AI chatbot can now also better understand when you ask for recent emails. <https://bit.ly/3s9397K>

Apple announces 'Scary Fast' event

The California-based tech giant recently announced its October

event and is calling it the 'Scary Fast', which probably is an ode to the upcoming Halloween season. The Scary Fast event will take place on 30th October at local time. So in India, we will get to see it on 31st October, which is Tuesday, at 5:30 AM. The chatter on the internet claims during this event that Apple will unveil the new iMacs and Mac-Book Pros. <https://bit.ly/3tMhbw1>

Gmail on large Android devices gets split screen

Google has announced a new split screen feature

for the Gmail app on large-screen Android devices. Users can now open links and attachments directly beside their email content when their device is in landscape orientation. "Last year, we announced numerous improvements to the Google Workspace experience on large screen Android devices, which included multi-instance support on Drive, Docs, Sheets & Slides. We're excited to introduce a similar feature for the Gmail app on Android tablets & foldables," Google announced. <https://bit.ly/40iASIK>

■ SMART HOME SERVICES

Jio will soon start Smart Home services

Jio is surely making heads turn in the telecom sector and it seems that they are not ready to settle. Jio has now partnered with a US-based SaaS firm, Plume. We hear that this partnership has come forward to produce Jio home products. Let's find out more about this partnership and what are Jio's future plans.

American brand Plume is considered to be the pioneer in network services and consumer experiences. Jio is now planning to get into the cutting-edge home

devices market. It also wants to get into small business services. This is where Plume comes into the picture. With the help of the company's highly scalable cloud platform, Jio and Plume will be able to deliver their services to around 200 million homes in India, according to the company. <https://bit.ly/46LySLp>

■ 5G

Airtel and Ericsson successfully tested RedCap on 5G network

Airtel just recently reached a new feat in terms of development. Just recently, it collaborated with Ericsson and Qualcomm Technologies to successfully test Ericsson's pre-commercial Reduced Capability (RedCap) software on Airtel's very own 5G network. The recent test, which was conducted by Bharti Airtel Ericsson and Qualcomm Technologies marked the first time that RedCap was implemented and validated in India which was conducted on a 5G TDD network. Now, what is this RedCap software? This RedCap software produced by Ericsson enhances the 5G capabilities. Once it is enabled, it offers a

wider range of use cases and even increases the number of 5G connections from various devices. <https://bit.ly/40bAJ9X>
