

advise getting a pair of headphones if you want to have a better and more reliable sound experience.

PERFORMANCE AND BATTERY LIFE

One thing that you can rely on the LG UltraPC for, as highlighted in this LG UltraPC Review, is the performance. The laptop is not a powerhouse by any means but delivers consistent performance. The LG UltraPC features an AMD Ryzen 5 7530U processor, which, firstly, is an odd choice, especially in the Rs 1 lakh price segment. LG should have at least gone with a Ryzen 7 7735U, mainly for DDR5 and LPDDR5 RAM support and more L3 cache.

Mainly because, the Ryzen 5 7530U limits the processor from using DDR5 and LPDDR5 RAM, which further puts a cap on the laptop's overall performance. In terms of benchmarks though, the Ryzen 5 7530U performs well. For instance, in the Cinebench R23 benchmark, it scored 8096 in the Multicore and 1314 in the single-core test. For instance, this chip is slightly less powerful than the Intel Core i5 1335U processor.

But it makes up for it, in terms of iGPU performance. In our LG UltraPC Review, we found that it scored 1349 and 3396 in 3D Mark's TimeSpy and Firestrike tests, which is better than the Iris Xe CPU found in most Intel processors. The LG UltraPC comes equipped with a commendable 512GB SSD which has read and write speeds, clocking in at 3632 MB/s and 2510 MB/s respectively. To contextualize this, such speeds translate into a lightning-fast user experience, whether you're transferring large media files, booting up

intensive applications, or multitasking between demanding software. For a content creator, this means that transferring a 10GB video file would take just a matter of seconds.

The LG UltraPC is equipped with an ample 16GB of LPDDR4X RAM and based on the AIDA 64 memory benchmark, the RAM showcases impressive figures: read, write, and copy speeds of 38906 MB/s, 41841 MB/s, and 42647 MB/s respectively. The latency stands at 111.7 ns, underlining a responsive user experience. In comparison, the HP Envy x360 15, which sports the newer LPDDR5 RAM, presents a compelling performance differential. Its read, write and copy speeds soar at 47709 MB/s, 76215 MB/s, and 57303 MB/s respectively, paired with a faster latency of 109 ns.

This stark contrast underscores the advancements of LPDDR5 over LPDDR4X. LPDDR5 offers not only faster data transfer rates but also improved power efficiency, which, in turn, can lead to better battery life and overall system performance.

But one area where the LG UltraPC surely gains ground is in terms of battery performance. It scored around 7.5 to 8 hours of battery life in the PC Mark 10 Extended battery test. The higher-than-expected battery life comes down to the AMD Ryzen 5 chip which consumes a mere 15W and the 72Wh battery is large enough to continuously provide backup for a long time.

VERDICT

This LG UltraPC Review reveals that the LG laptop is a blend of commendable strengths interspersed with perplexing oversights. It shines with its sturdy build

quality, luxurious design, and impressive keyboard-touchpad duo, making it a standout in the design and build quality. Its 512GB SSD and the 16GB LPDDR4X RAM certainly pack a punch, delivering fast and reliable performance for most tasks. The battery life is another feather in its cap, thanks to the efficient AMD Ryzen 5 chip and a sizable battery.

However, it's impossible to overlook the puzzling choices LG made. The trackpad's uneven finish, the absence of a keyboard backlight in an age where it's considered standard, and a screen that misses the mark in color accuracy are all blemishes on an otherwise solid machine. Additionally, its choice of processor and memory technology feels dated.

In the under Rs 1 lakh bracket, the LG UltraPC carves a niche for itself as a premium thin, and light laptop. Yet, the missed opportunities are evident. If you prioritize build quality, battery life, and a superior typing experience, the LG UltraPC is a worthy contender. But if cutting-edge performance and display accuracy are high on your list, you might want to explore other options in the market.
