Does this section even need an introduction? From computers to mobiles, and headphones to GPUs, it's all here...

Find out which laptop is the best

Manish Rajesh | manish@digit.in

If you're in the market for a budget gaming laptop, chances are you have come across a laptop featuring the new NVIDIA GeForce RTX 4050 Laptop GPU. This is the latest budget GPU offering for gaming laptops from NVIDIA and we have tested quite a few laptops featuring this card this year. In this RTX 4050 gaming comparison, we're going to be comparing all of the RTX 4050 laptops we've tested so far with each other, so that you can find out which one is the best performer and which one offers the best value for your money. To give you a better idea of how these laptops perform, we've also

compared them to a gaming laptop featuring an RTX 3060 and a laptop featuring an RTX 3050.

We've done a detailed comparison for the previous generation of budget gaming laptop GPUs as well, the NVIDIA GeForce GTX 1650, the RTX 2050, the RTX 3050 and the RX6500M. Similarly, if you want a better idea of how the RTX 4050 performs in comparison to the RTX 4060, RTX 3060 and RTX 3070, we've got a detailed breakdown of that as well.

We're going to be taking a look at a total of 8 laptops in this article, which we will be dividing into two categories. We're making the split based on GPU

TGP, or Total Graphics Power. The lower TGP RTX 4050s will be compared to the RTX 3050, while the higher TGP RTX 4050s will be compared to the RTX 3060. With that out of the way, let's take a look at our contenders for the first batch (*table on the right*).

Low TGP RTX 4050 Gaming Laptops

Our first batch of comparisons entails these three laptops, with both the RTX 4050s featuring TGPs of 45W, and the RTX 3050 laptop featuring a much higher TGP of 95W. We've said that TGP can make a major difference when it comes to performance, but we'd argue that it
