

consumption with ease, and can tackle light photo and video editing tasks. Their lightweight nature makes them perfect for on-the-go usage, without compromising on battery life, which often lasts around 6-10 hours.

2 Processors

Consider laptops with Intel's 11th, 12th, or 13th Gen Core processors or AMD's Ryzen 5000 or 7000 series processors. These CPUs offer a good balance of performance and energy efficiency, suitable for the demands of Thin and Light laptops.

3 RAM

Opt for a minimum of 8GB RAM, although 16GB is preferable for smoother multitasking. The RAM type could range from DDR4, LPDDR4, DDR5 to LPDDR5, with the latter two being faster and more efficient. Note that LPDDR5 variants are often not user-upgradable.

4 Storage

A solid-state drive (SSD) is a must for faster boot times and quicker data access. A minimum of 512GB SSD is recommended, though 1TB provides a more comfortable space cushion.

5 Display

A display size of around 13 to 14 inches with Full HD resolution is standard. Look for IPS panels for better viewing angles and color accuracy. A brightness of around 300-500 nits is recommended, though higher is better for outdoor usage.

6 I/O ports

Essential ports include USB

Type-A, USB Type-C (preferably with Thunderbolt support), HDMI, and a 3.5mm headphone jack. An SD card reader and additional USB ports are a bonus for better connectivity.

7 Chassis, keyboard, build quality

A rigid chassis with minimal flex is preferable for durability and a better typing experience. Key travel of around 1.0 to 1.5 mm provides a comfortable typing feel. Metal construction or metal elements in the chassis are desirable for better durability.

CREATOR LAPTOPS

1 Main use case

These laptops are mainly used for creative workloads. They've got top-of-the-line displays, a powerful processor, a dedicated GPU, plenty of ports and also a slim profile.

2 Processor

Choose either Intel 12th or 13th Gen "H" or "P" series processor

or an AMD Ryzen 7 7840HS or higher as your CPU. Both offer great performance but Intel Core i9 variants will offer maximum performance amongst the bunch.

3 RAM

Choose at least 16GB DDR5 or LPDDR5 memory. If you get the former one, then upgrade it to 32GB a year or so down the line.

4 GPU

An Nvidia RTX 4050 or higher should suffice as a good GPU for content creation.

5 Storage

At least 1TB of PCIe Gen 3 SSD or higher is strongly recommended for any creator laptop.

6 Display

Either an OLED display with 100% DCI-P3 colour space coverage or an IPS LCD panel with high brightness

is what you need. Make sure that both of them are colour accurate as well with a Delta E value of less than 3.

7 I/O ports

USB-A, USB-C ports connect peripherals; USB-C enables fast data transfers, display output. HDMI, DisplayPort extend displays. SD card

reader, Ethernet port facilitate file transfers; audio ports for sound monitoring.

8 Chassis, keyboard, build quality

A creator laptop's chassis, ideally metal, ensures durability and better heat dissipation. The keyboard should have adequate key travel and backlit keys for comfort and low-light work. High build quality, reflected in durability and a premium finish, withstands daily use, making the laptop a reliable extension of the creative process.
