

OnePlus Open

The OnePlus Open's new primary camera sensor with Pixel Stacking abilities impressed us. While its main benefits are seen in low light images, this daylight shot cannot be ignored to show off its prowess. You've got close to natural colours, superb dynamic range, and great detail in this image.

Apple iPhone 15 Plus

The new iPhones are unbeatable when it comes to detail retention thanks to the photos being saved at a higher 24-megapixel resolution. This expansive shot looks pristine with incredible detail, and nice warm colours.

Samsung Galaxy S23 Ultra

This shot from the Samsung Galaxy S23 Ultra shows why this phone still has one of the best ultra-wide shooters in 2023. You can see excellent dynamic range, solid colours, and minimal barrel distortion.
