

You could soon use text-to-video AI tool on Instagram and Facebook

Meta is working on a new AI model, namely Emu. This new AI model could be integrated into Facebook and Instagram. This will help users to come up with more creative content on social media. Along with that, it could also help users to do editing as well. Meta CEO Mark Zuckerberg has teased that they working on Instagram and Facebook with new AI tools. This could soon let you generate text-to-image and text-to-video content. The social media platforms could soon let you edit pictures and generate "high-quality videos" using text. <https://bit.ly/3GEp7Dk>

Google Chat now lets you 'star' messages

Google has announced a new feature for its communication service Google Chat. The new feature will allow users to "star" important messages in Chat, making it easier to locate and access them later without having to scroll through extensive conversations. "Following the recent announcement of home and mentions in Google Chat, we're excited to introduce starred on web, an additional shortcut in the redesigned navigation panel that helps you stay on top of your most important messages in Chat," Google announced. <https://bit.ly/3Tgqr6L>

WhatsApp AI Assistant is now available

Recently, Meta announced an AI chatbot for its social media platforms such as Instagram, WhatsApp, and Facebook Messenger in the US. This happened at the Connect 2023 event in Düsseldorf, Germany. In the latest development, the AI Assistant is now rumoured to be featured in a beta version of WhatsApp. This means the Meta AI assistant is being tested in WhatsApp. Interestingly, if this is true then the Meta AI Assistant could go global soon. The WhatsApp AI assistant will work the same way as the Meta AI assistant. <https://bit.ly/48g0tEZ>

Apple to bring RCS support for iPhones next year

It hasn't been long since Apple dropped the iPhone 15 series but the talks about next year's iPhone 16 series have already started to make noise on the internet. Just like is the case with every other smartphone, rumours about the iPhone 16 series

have started to pour in too and the chatter about the California-based tech giant is not dying. We now hear word that Apple might be working on strategies to make messaging between Apple and Android users more convenient. Reports suggest that

Apple could be integrating the Rich Communication Services (RCS) by 2024 to improve the texting experience between Apple and Android users. It's still not known yet when will Apple introduce this feature to the public. <https://bit.ly/3Rgot3U>
