

Sennheiser AMBEO Soundbar Plus

An all-rounder soundbar that is worth every penny!

There are certain brands whose name is enough to define their legacy and the quality of the products that they make. Sennheiser is one of them. Primarily known for making class-leading studio and live audio equipment, including headphones, speakers, and microphones, the brand has also been active in the consumer audio space. They recently came out with the Sennheiser AMBEO Soundbar Plus. The soundbar looks and feels pre-

mium from the get-go. However, only when I spent time with it I got to know whether it was worth its price tag of ₹1,19,990 (at the time of writing), or would it pale in comparison to the offerings by its competitors in the space like Sony, Yamaha, JBL, Sonos, and Samsung. Spoiler alert: It did live up to the expectations pretty much.

Sennheiser AMBEO Soundbar Plus – Build and Design

As mentioned above, the Sennheiser AMBEO Soundbar Plus impressed me right out of the box with its looks

and build quality. The body of the bar is made primarily of plastic, with fabric covering the front of the bar and flowing into the top and bottom faces. You may have seen a lot of brands go with a metal and plastic combination in their bars, and that may lead you to believe that the finish of the AMBEO soundbar Plus is inferior. However, what Sennheiser has managed to achieve with a plastic and fabric combo is in no way inferior to the metal and plastic build sported by the competition.

There is a nice heft to the soundbar, and the feet are capable of keeping the soundbar in place even when I was blasting music at max volume. When compared to its competitors like the Sony HT-A7000 and the like, the Sennheiser AMBEO Soundbar Plus is both shorter and narrower, making it a perfect fit for small and constricted spaces. And, given its looks and overall design, it will also fit into most of the interior designs. And you should not have much to worry about with the sub-woofer as well.

Features, I/O, and Remote – Represent the brand well

In terms of features, I/O, and performance, the Sennheiser AMBEO Soundbar Plus is decked out with almost all the bells and whistles. You could reasonably ask for it. Let's start off with the I/O. It has plenty, and almost all that you could ask for –

- HDMI 2.0 x2,
- HDMI eARC x1,
- Optical, and
- RCA line In

Being the gamers that we are, we would have loved the bar to have had a selection of higher standard HDMI ports here instead of 2.0, as this means that we cannot game at 4K resolution at 120Hz. However, what you have is plenty good for regular content and music consumption. For streaming over the air, you get – Apple AirPlay 2, Chromecast (Built-in), Spotify Connect, and Tidal Connect.
