

EPOS Adapt 360 Wireless Headphones

Wonderful headphones for people working from home at a steep price

Satvik Pandey | satvik@digit.in

EPOS, after branching out from the legendary audio brand, Sennheiser, has cemented a place of its own in the industry. The brand has become known for its products that find use in office spaces, like webcams, headphones, and the like. The brand entered India with a positive reception and has come to be known to provide products that not only inherit their quality from Sennheiser but also bring in one of the best solutions, developed by the team at EPOS. One of the latest entrants from EPOS in the productivity solutions space, is the EPOS Adapt 360 Wireless Bluetooth Headset. These headphones

come with a lot of promise, not only in terms of their sound, but also in terms of the engineering and software integrations that go behind these products, making them to be a force to be reckoned with.

I got these headphones delivered to me at the Digit Test Centre a while back, and I have been using them for calls, gaming, and everything else possible, to see whether they stand up to the claims or not. Having reviewed headphones for the Digit Zero1 and Best Buy Awards, I was keen to see whether these would stand up to the mainstream competition, or they would carve out a niche of their own. So, here are my views on the

EPOS Adapt 360 headphones after using them for a couple of months –

Build and Design

The EPOS Adapt 360 draws a lot from Sennheiser's HD line of Bluetooth headphones when it comes to its design. If you were to draw one to one comparison, then these headphones would be pitted against the Sennheiser HD 450SE (ANC). However, there are a couple of differences that pull these headphones away from the traditional Sennheiser headphones that we have all come to love. First, is the branding on the headphones.

Given that these headphones would be finding use in office spaces and meeting rooms, the branding is much less aggressive on these headphones than that of the HD 450SE. You get the EPOS Sennheiser logo at the end of the headband, and that's about it. Then there's additional accent colours added to the buttons, which makes these headphones distinguishable from their spiritual cousins. I got to see both the colourways of the headphones - black and white - and while the black colourway had a bit more of a monotonous and muted design, on the white pair, you get silver accents at the end of the headband, which look great.

As for the materials used, you get a durable plastic build throughout. At ₹24,990, I would have loved if these headphones had a metallic inlay on the headband, as it gives a lot more durability to one of the most strained parts of headphones. Apart from that, there's not much to complain about. During my long sessions using these headphones, the headband did not dig into my skull, and the earcups ensured that there was no discomfort experienced on that end either.

I passed these headphones around to my colleagues at the Test Centre, and there were almost no complaints about the fit of the headphones from anyone. The swivel on the cans ensured that there was a great seal around the ears, and that provided for great passive isolation, which is a must, especially
