

Flagship Phone

Creme de la creme of smartphones

Flagships epitomise the pinnacle of smartphone technology, standing as the creme-de-la-creme in the ever-evolving landscape of mobiles. They represent the culmination of cutting-edge innovation, boasting unparalleled features and performance that not only set them apart, but also set the trend for what is to come in the world of mobiles in the near future. From latest processors to stunning displays, flagships showcase the zenith of technological prowess.

Be it in terms of cameras, displays, performance, battery, and even software, flagships often introduce groundbreaking functionalities, which slowly trickles down to smartphones in the mid-range or the budget segment after a point. In 2023, top-tier smartphones persist in redefining tech standards, boasting cutting-edge features and specs. Leading brands like Apple, Samsung, iQOO, OnePlus, and Google have unveiled their pinnacle models.

These devices showcase robust processors, stellar cameras, vivid displays, enduring battery life, and rapid charging capacities. They also incorporate extras like water and dust resistance, wireless charging, and fingerprint sensors. These strides in flagship smartphones for 2023 deliver an unparalleled user experience.

Flagship smartphones also set the standards for design and user experience, consistently pushing the boundaries of what's possible in the palm of your hand. These devices cater to those who are seeking the ultimate in mobile excellence.

Winner: Samsung Galaxy Z Fold 5

The Samsung Galaxy Z Fold 5 came with a host of improve-

Samsung Galaxy Z Fold 5

Price: ₹1,54,999

ments all around. While from the looks of it, the smartphone doesn't look too different from its predecessor, in terms of the overall refinement and performance jump, the smartphone shines bright. With tough competition from smartphones like the iPhone 15 Pro, the iQOO 11 and the likes, the Samsung Galaxy Z Fold 5, with its custom Qualcomm Snapdragon 8 Gen 2 chip and ample RAM was on top of the pyramid this year when it comes to performance. Hands down, one of the fastest performing phones to ever show up at the Digit Test Centre, there was no phone that came close to the Samsung Galaxy Z-Fold 5 in terms of performance. Samsung has managed to extract the maximum performance out of the Snapdragon 8 Gen 2 that comes packed in this phone, powering this beast. The phone's outright dominance in performance helped it make it to the top spot in our performance scoring sheets.

Best Buy: iQOO 11

iQOO's performance and gaming-oriented DNA has shown up in the brand's flagship for 2023. The first smartphone in India to launch with the Qualcomm Snapdragon 8 Gen 2 chip, paired with up to 16GB of RAM makes the iQOO 11 nothing less than a beast when it comes to performance. While the smartphone fell short of performance numbers when compared with the Samsung Galaxy Z Fold 5, it still offered the best price-to-performance ratio in all the flagships that were launched this year, making the iQOO 11 this year's Digit Best Buy Award winner for the flagship smartphones category.
