

In 2023, the thin and light laptop segment saw major advancements with the ASUS Zenbook S OLED, HP Pavilion Aero 13, and Lenovo YogaBook 9i. Each model brought unique strengths to the table, with ASUS focusing on design and performance, HP on lightweight practicality, and Lenovo on innovative dual-display technology, highlighting diverse user preferences in the segment. But there can only be one winner.

Zero 1 Award Winner: **ASUS Zenbook S OLED 13**

The ASUS Zenbook S 13 OLED (2023) is a testament to ultrabook innovation, combining sleek aesthetics with practical functionality. It features an efficient 13th-gen Intel Core i7-1355U processor, accompanied by Intel Iris Xe graphics. Its ultra-slim design leads to a shallower keyboard and constrained performance under heavy loads. Despite that the ASUS Zenbook S OLED 13 doesn't miss out on performance. The Intel 13th Gen Core i7 chip barely loses points in throttle tests and delivers solid performance in both 3D rendering and computing tasks. The OLED display is amazing too, featuring a 550 nits peak brightness, 150% sRGB and 100% DCI-P3 coverage, numbers that are poised to give you one of the best viewing experiences. On top of that you also have a super fast SSD, enough RAM to handle everyday and demanding tasks and a quite exquisite keyboard and trackpad combination.

Premium Thin And Light Laptops

Power Meets Portability

ASUS Zenbook S OLED 13
Price: ₹1,49,990

DIGIT BEST BUY WINNER-2023

HP Pavilion Aero 13
Price: ₹78,990

Runner-up: **Lenovo Yoga Book 9i**

The 2023 Lenovo YogaBook 9i, designed for a niche market, features dual 13.3-inch OLED touchscreens with 100% DCI-P3 color coverage, offering an iPad-like visual and touch experience. It runs on a 13th Gen Intel Core i7-1355U processor with 16 GB RAM and a 512GB SSD, providing adequate performance for routine tasks but struggling with more demanding ones. Despite its innovative dual-screen design, it has limitations in its cooling under heavy usage. In short, innovative design but unrefined execution. Priced at Rs 2.49 lakh, it's a high-end choice suitable for users valuing dual-screen functionality over conventional laptop aspects, earning its position as the runner-up in the premium thin and light category.

Lenovo Yoga Book 9i
Price: ₹2,49,900

Best Buy Awards: **HP Pavilion Aero 13**

The HP Pavilion Aero 13 redefines thin and light laptops with its ultralight magnesium-aluminum body and robust performance. It excels in daily tasks and light gaming. The 13.3-inch WUXGA IPS display, featuring micro bezels and 400 nits brightness, offers a modern aesthetic. Not just that, the AMD Ryzen 7 7735U features a decently powerful iGPU capable of running games. I played GTA V, Shadow of the Tomb Raider and even Crysis three remastered. And the HP Pavilion Aero 13 ran all of them at a playable frame rate. It is not just because of the iGPU but also because of the processor's strong single and multicore performance. Another thing which impressed me is the laptop's battery life of 532 minutes, which is 8.8 hours at 100% screen brightness. Impressive to say the least. The diverse variety of ports, a solid build quality, ultra compact size and an absolute killer price makes the Aero 13 worthy of the Best Buy award, ideal for budget-conscious users seeking a high-quality ultrabook.
