

With great audio being one of the quintessential aspects of a great gaming experience, we have seen many brands come in with headphones that have the potential to actually help you game better and get good. Technologies like spatial audio are almost a norm across budgets, and brands are pushing boundaries to get you the best gaming experience possible by packing in not only great features but also focusing on tuning their headphones better. Even wireless connectivity is not as unpopular as it used to be. Such has been the evolution of gaming audio. This year, the competition was pretty close, with the difference in performance between the first and second headphones on our list being minimal.

Winner: SteelSeries Arctis Nova Pro

The wired cousin of the SteelSeries Arctis Nova Wireless, released in 2022, the SteelSeries Arctis Nova Pro, took the top spot on our scoring sheets and took home the Digit Zero1 Award for the Best Gaming Headphones in 2023. The Nova Pro carries over the same design as the Nova Pro Wireless and the performance as well. The headphones have a fairly balanced sound, with a subtle boost to the mids and the highs. However, they manage to preserve the bass well, reproducing every sound effect with great detail and the way that the developers intended to.

SteelSeries Arctis Nova Pro
Price: ₹39,999

DIGIT BEST BUY WINNER-2023

JBL Quantum 910 Wireless
Price: ₹26,999

If you are someone who is into multiplayer games, communicating with your teammates, then the boost in the mids makes sure that their voices are heard by you clearly. Talking about communication, the microphone on these headphones is also great. It does a great job of isolating your voice and filtering out the background noise in some relatively challenging environments as well. The out of box sound profile of these headphones makes them suitable for general content consumption as well. And, using the GameDAC that comes packed with these headphones, you can tune the sound to your liking as well. The positional accuracy of the sound coming from these headphones and the staging is also on point, ensuring that you are able to track everything that comes at you in the game with ease. Across platforms, these headphones carry their performance, ensuring that you will not have difficulty switching between platforms. With their excellent sound quality, be it in input or output, the SteelSeries Arctis Nova Pro stood out amongst the gaming headphones launched in 2023.

Runner up and Best Buy: JBL Quantum 910 Wireless

The winner of the Digit Best Buy Award in the Best Performing Gaming Headphones Category, the JBL Quantum 910 Wireless, also stood second in our performance standings. The reason why they bagged the Best Buy Award was simple - they perform great, they are built well, they are comfortable to wear for long gaming sessions, and carry looks that would appeal to every hardcore gamer. These headphones come packing with JBL Quantum-SPHERE 360 technology, which takes spatial audio to the next level by adding head tracking to the mix. If you are not on your PC, then you will be missing out on the head tracking, but the JBL QuantumENGINE remains, which brings great positional audio. These headphones also sport ANC, which honestly is better than some mainstream headphones. Their wireless connectivity does not introduce any noticeable lag into your gaming experience, and the battery, which lasts over 30 hours, also ensures that you do not have to be tethered to your system. The microphone on these headphones is also one of the best of the lot we tested this year. The design of the headphones allows them to sit comfortably on your head for longer periods of time without causing any discomfort.
