On the Flip side: Chatting Foldable Strategy with OPPO's Damyant Singh Khanoria

"Foldable phones have been driving the premium segment", says **Damyant Singh Khanoria**, CMO, OPPO India

Dhriti Datta | dhriti@digit.in

OPPO stormed the market with not one, but two, foldable phones in 2023. Early in 2023, the company brought the much-loved OPPO Find N2 Flip foldable to the Indian smartphone market. Given its success, the successor – the OPPO Find N3 Flip – was launched in a matter of months boasting a couple of meaningful

improvements. The most impactful improvements were seen in the camera department. So much so, and upon using this smartphone for a couple of weeks, it has become my favourite camera system to exist on a flip phone. You can read more about my thoughts in our full review of the OPPO Find N3 Flip.

I recently had the chance to candidly chat with Damyant Singh Kha-

nor, CMO at OPPO India about the company's foldable strategy and how they plan on differentiating themselves in this competitive market. Here's how the chat went.

Q What was the rationale behind launching two Flip phones in one year?

A The foldable smartphone market in India is growing rapidly, and this trend will continue in the coming years. Foldable phones have been driving the premium segment, so it made perfect sense for us to step into the foldable market earlier this year with the Find N2 Flip.

The Find N2 Flip—a culmination of five years of R&D—brought together the best in foldable technology and design and created an inflexion point in the flip phone industry. With the success of the Find N2 Flip, we introduced the Find N3 Flip. This new iteration improves the Find N2 Flip's winning formula with upgrades in cover screen functionality, camera experience, and performance.

Q The OPPO Find N3 Flip has the best cameras we've tested in a Flip. How was this achieved while still ensuring the device is pocketable?

A The OPPO Find N3 Flip is the perfect blend of innovation and artistry, centered around achieving compact perfection that easily fits in your pocket. In an industry-first, the Find N3 Flip introduces three powerful cameras as part of its primary camera setup, a result of our collaboration with the legendary camera maker Hasselblad. These cameras are integrated into a circular module next to the cover screen, ensuring you get exceptional photo and video quality in a compact design.

Building on the success of the Find N2 Flip, where we introduced a sizable 3.26-inch cover display, we've taken it a step further with the Find N3 Flip wherein we have introduced 40+ apps right on the cover screen. We inten-
