

tionally kept the screen size the same so that our customers could have the best of both worlds – the versatility of our cover screen and the industry first triple camera setup.

Q The cover screen of the Find N3 Flip is pretty versatile but some competitors can run more apps. What is being done to address this?

A OPPO Find N3 Flip is the first flip globally to feature 40+ apps on cover screen without any third-party support. It offers an impressive array of features that boost productivity and communication.

Q What R&D has gone into the hinge? How has it become better to ensure longevity?

A Our fold journey began in 2018 when we started the R&D for foldable smartphones, leading into innovative products like the Find N3 Flip and Find N2 Flip, featuring our patented Flexion Hinge. The hinge sets new industry standards for durability, seamless design, FlexForm Mode, and an invisible crease.

With the Find N3 Flip, we continue to lead in innovation, introducing a micro-carved flowing texture in the hinge, a dual friction plate structure for enhanced FlexForm stability, and an upgraded New Generation Flexion Hinge for lasting performance. This innovation is rigorously tested, with the upgraded Flexion Hinge undergoing 600,000 folds certified by TUV Rheinland, equivalent to 16 years of usage with an average of 100 folds per day.

Q What are the main focus areas that differentiate the OPPO Find N3 Flip from the Find N2 Flip other than the camera?

A The OPPO Find N3 Flip stands out from the Find N2 Flip in several significant ways, beyond just the camera. It's the world's first flip phone to feature a triple camera setup (with 50MP OIS, 32MP, and 48MP lenses), which includes a telephoto lens with

2x optical zoom. It's also the most durable flip phone globally, certified by TUV Rheinland to withstand 600,000 folds (equivalent to 16 years if folded 100 times a day).

Furthermore, it introduces a unique micro-carved flowing texture on the rotating hinge, achieved through

continuous carving up to 12,000 times over 3 minutes, resulting in a captivating water-wave-like effect. Additionally, it's the first flip phone to offer more than 40 apps on the cover screen. Lastly, the Alert Slider adds a stylish and practical touch to the phone's design. **d**
