

■ TELECOM REGULATIONS

Telecom Bill 2023: 5 things you should know about it

The Telecommunications Bill 2023 was passed in the Lok Sabha of the Parliament yesterday, during the ongoing Winter Session. The bill was tabled by Union Minister Ashwani Vaishnav and plans to act as a replacement to the existing Indian Telegraph Act of 1885, the Indian Wireless Telegraphy Act of 1993, and the Telegraph Wires (Unlawful Possession) Act of 1950. Let's

see what this bill is all about as we tell you five key things that you should know about this bill –

■ Boosting telecom infrastructure

Firstly, once the bill becomes law, it will aim to speed up and enhance the telecom infrastructure in India, particularly for 5G. For this, the bill suggests reforms that should be implemented. The measures for the same also include exempting the telecom networks installed on any property from claims, liquidation, or similar issues related to that property.

■ Safeguarding public interest

The Telecommunications Bill 2023 also gives the government the power to make rules in the interest of the public to safeguard them from any mishaps when it comes to cybersecurity in telecommunication networks and services. This can be done in the interest of national security, public interest, or even in case of an emergency.

■ Press freedom protection

The bill also has a provision that prohibits the press messages that come from correspondents of the Centre of the state governments from being intercepted or detained. This will remain so unless the same has been prohibited under rules of public emergency, public order, etc.

■ Tackling Spam Calls

Next, the bill also addresses the spam calls issue. To protect consumers from spam calls and messages, the bill aims to give the legal mandate to the registration of "Do Not Disturb" or DND.

■ Telecom spectrum allocation

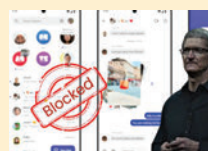

Lastly, once the bill becomes a law, the Central Government shall hold auctions to assign spectrum for telecommunications. The exception is that the entries listed in the First Schedule will be assigned the same through the administrative process.

India's first AI model launched

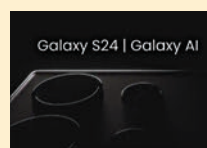

AI is the most influential and trending thing currently in the tech world. And

it is affecting all of us daily. Currently, OpenAI's ChatGPT rules over the market. However, all major tech companies are fighting against time to bring out a Generative AI model to compete with Chat GPT. The craze has traveled to India too. Ola co-founder Bhavish Aggarwal's artificial intelligence venture Krutrim Si Designs has now unveiled Krutrim, which will join the AI race and is the first of the multilingual AI models that the company has to offer. <https://bit.ly/3Saxj5w>

Apple blocks Android iMessage app 'Beeper Mini' within a week of launch

Apple's exclusive messaging experience 'iMessage' has always been a favourite, even for those who don't have an iPhone. The war between blue text message bubbles and green ones is quite old. For quite some time, Android-using companies have been trying to find a way to allow iMessages on Android smartphones. Remember the recent Nothing-Sunbird controversy? Well... It's kinda the same. <https://bit.ly/3tJyajC>

Samsung set to unveil Galaxy AI

The Galaxy Unpacked 2024 will bring the Galaxy S24 series, and

along with that, the Galaxy AI. We all know about the Samsung Galaxy S24 series but do you know what Galaxy AI is? Yes, this is something new and it is expected to take the limelight of the occasion. Here's everything that we know about Galaxy AI and the Galaxy S24 series. It is also expected to see a lot of AI infusions this year, especially in the top-end Galaxy S24 Ultra. The Galaxy S24 Ultra is said to feature the Galaxy AI. <https://bit.ly/48syRgo>
