

at 30 fps. Whereas, the Redmi 12 5G and Realme C53 only offer up to 1080 pixels of video at 30 fps. I found the camera to be very good. If we talk about a sub-10K smartphone, then the Blaze 2 5G could be one of the top choices for photography.

Let's talk about the front camera first. The 16-megapixel selfie shooter captures good images with decent details and vibrant colour. The portrait shots from the front camera also impressed me. Moving to the primary camera, it also captures well-detailed images. However, the AI tuning of the images makes them way more colourful than required. Meaning the colours are not true but they still work for me.

The 2x digital zoom is also pretty good. As you can see in the picture samples, the normal and zoomed pictures are not very different. Both pictures have similar details and colours. Next is the portrait mode. The back camera shoots really good portraits in daylight. It captures good details and doesn't blur the

borders of objects. But, in low light, the portrait mode is not very effective. In low light, there is a lot of smoothening on the portrait pictures.

Lastly, there is night photography. Let me tell you that there are two types of night photography. A, when there are lights in the frame, and B, when it's completely dark. In the former case, the camera performs well, with good colours and good details. But when it's completely dark, the smoothening steps in, which I don't think anyone will like.

BATTERY

Speaking of its battery, I must say that it works brilliantly. It is packed with a 5000mAh battery that comes with an 18-watt fast charging support. It takes about 1.8 hours to charge from 0 to 100 percent. On a single charge, you can continuously use the smartphone for streaming for around 12 hours.

In terms of battery backup, the Blaze 2 5G performed quite well. I played Call

of Duty: Mobile for 15 minutes and the battery dropped only 3 percent. Further, I used GPS for one hour and it resulted in only a 6 percent drop in battery.

VERDICT

To sum it all up, the Lava Blaze 2 5G is a decent smartphone in the sub-10K category. Even though there's scope for improvement, you get some really great features for the price point. It is a good-looking smartphone with an attractive back panel. For the price, you even get good cameras. The OS and display, however, need improvements. And last but not least, the smartphone comes with a big and trustworthy battery. If your budget is around ₹10,000, then you can surely consider this smartphone if you're looking for a 5G phone with a decent camera and battery.
