

PERFORMANCE

This is where it gets more interesting. Why? Because the Tecno Phantom V Flip is powered by the MediaTek Dimensity 8050 processor. Now this processor is used mostly for mid-range smartphones and the asking price for this smartphone is over ₹50k. The Dimensity 8050 processor works fine but if you are running heavy performance operations, you will notice heating on the Phantom V Flip. Had it been the normal ₹50,000 smartphone, you would have easily gotten the flagship processor. But because of its foldable nature and cost-cutting, we get the MediaTek Dimensity 8050 in the Phantom V Flip. The same problem occurred with the Moto Razr 40 as it featured the Snapdragon 7 Gen 1, which also is a mid-range chip from last year.

The upper half of the smartphone heats up while doing performance runs such as gaming or benchmarks. It heated up in just 15 minutes of Call of Duty: Mobile. However, the battery drain is fine while gaming. We'll get back to the battery part later.

I ran the benchmark tests on the smartphone and here are the scores:

- **Antutu:** 666233
- **Geekbench:** 1102 single-core and 3386 multi-core
- **3DMark:** 4581
- **MobileXPRT 3:** 1598
- **PC Mark:** 14921
- **GFXBench:** Aztec Ruins (1847 frames), Car Chase (2154 frames), and Manhattan 3.1 (3571 frames).
- **Androbench:** The storage of the Tecno Phantom V Flip has done really well in this benchmark test if we compare it to other smartphones in the same segment.

It went perfectly fine through all the benchmark tests except for the GFXBench, where it heated a lot. I measured the temperature and it came out to be somewhere around 45 degrees Celsius. Sad but true, the Tecno Phantom V Flip has heating issues which causes minor lags, but only when you are running performance-centric operations or charging it.

Now if we talk about its operating system, which is HiOS 13.5 based on

Android 13, it worked fine for me. I didn't come across any ads, however, the OS has some bloatware. You can uninstall those unnecessary apps to get a cleaner experience. Moreover, the HiOS 13.5 comes with some super cool features such as you can use it half-bended, the multi-tasking is very easy, and it features Ella, which is a chatbot connected to ChatGPT. You can access Ella by holding the power button.

CAMERA

The Tecno Phantom V Flip is equipped with a dual camera setup, holding a 64-megapixel main camera with f/1.7 aperture and a 16-megapixel Ultrawide lens with f/2.2 aperture. You can also record 4K videos at 30FPS on this foldable smartphone. [trawide shot](#)

In my opinion, the camera works fine and the details are sharp. However, I felt that the colours were a bit dull. Further, the portrait mode works fine on 1x but the moment you switch it to 2x, the results are underwhelming, to say the least. Had there been a depth sensor, the portraits could have been much better.

For night photography, the Tecno Phantom V Flip should not be your go-to smartphone. I played with the camera in low light and the results were disappointing. However, as you can see in the samples below, the Phantom V Flip captured a good low-light photo when there's some light in the frame but in low-light conditions, the camera won't work well. Why would I use the 'Super Night Mode' if there's light in my frame? That would induce artificial illumination and spoil the shot anyway! Further, you'll get plenty of modes to play with on the camera such as Sky Shop, Dual Video, and more.

Coming to the front camera, here also, faced the same problem. The pictures are a little unrealistic. The camera is adding unnecessary colors and smoothening things for no reason, but the details are nice. The portrait mode is not much of a use. The portrait shots don't focus on you particularly and the background stays visible.

BATTERY

The battery is one element of this smart-

phone that has impressed me the most. I charged it from 0-100 percent and it took only 41 minutes to charge it. And on a full charge, I was able to use the Phantom V Flip for a full day while constantly using the smartphone.

I played Call of Duty: Mobile for 15 minutes on this smartphone, and the game consumed only 6 percent of its battery. After that, I ran Google Maps on my smartphone for one hour. I started the Maps at 66 percent and after one hour it dropped to just 58 percent. So an hour of GPS navigation consumed 8 percent of its battery. One drawback of the battery I saw is that it doesn't last long in standby mode.

VERDICT

The Tecno Phantom V Flip is an affordable foldable smartphone that is a mixed bag when it comes to performance. The design is unique, it has good battery life, and decent performance, and the fast charging is a big plus. But on the other side, the core aspects like display, camera, and even overall performance leave a lot to desire. Especially when the price point by itself is still in the premium smartphone segment. For Rs. 54,999, I expected more from the Tecno Phantom V Flip.
