

Android Mobile Phones

The best of the green side

Dhriti Datta | dhriti@digit.in

In the fiercely competitive smartphone market, the best Android phones don't just stand their ground; they give Apple's flagship phones a run for their money. If you're seeking an Android phone that not only matches but even surpasses Apple iPhones in some cases, look no further than these exceptional devices in the higher-end and premium segment. With unmatched performance, lightning-fast displays, and top-tier camera systems, these Android powerhouses redefine what a smartphone can do. From the impressive Samsung Galaxy S23 Ultra to the innovative Vivo X90 Pro and value-packed OnePlus 11R, these are the best Android-based smartphones that we recommend across various price segments that you should be considering when in the market for a shiny new phone.

Samsung Galaxy S23 Ultra

The Samsung Galaxy S23 Ultra sets a new standard for premium flagship experiences, surpassing all expectations. It addresses past issues with a cooler device and impressive battery life. Its super powerful chip ensures seamless

performance, while the top-notch camera captures stunning shots. Samsung has outshined its competitors, providing the epitome of Android smartphones and a truly well-rounded offering that challenges the Apple iPhone 15. Highly recommended when looking for the best Android phone to buy.

iQOO 12

The newly-launched iQOO 12 is a gamer's dream. It is the most performance-packed device money can buy in its price range – packing flagship-grade features across the board. What stands out the most is the Snapdragon 8 Gen 3 processor, which can breeze through just

about any task you throw at it. It is the fastest chipset in the mobile market right now, beating out even the monstrous Apple A17 Pro processor. The phone is also equipped with a pretty impressive camera setup this year around. All in all, if you're a power user looking for a flagship experience at about half the cost, the iQOO 12 is perfect for you.

Vivo X90 Pro

If you prioritize an exceptional camera and crave a phone with a premium and distinctive design, the vivo X90 Pro is an absolute game-changer. Its camera setup is unmatched, capturing brilliant images in all lighting conditions with low-light performance that

is simply outstanding. The X90 Pro's ability to shoot in pitch-black environments and deliver portrait shots akin to a mirrorless camera is truly awe-inspiring. While there are minor imperfections, such as a slight color shift when focusing on smaller subjects and slight inconsistency between shots from the primary and wide-angle shooters, they hardly dampen the X90 Pro's prowess. In the world of smartphone cameras, vivo has undoubtedly aced the game with the X90 Pro, making it the ultimate choice for those who value a top-notch camera experience and a phone that exudes premium appeal.

OnePlus 11R

For a flagship-like performance at an unbeatable price, the OnePlus 11R is our top recommendation. With a blazing-fast processor, exceptional camera stack, and an impressive AMOLED display with HDR support and 120Hz refresh rate, it stands out as the best

Android offering in its price range. The 100W fast charging and 5000mAh battery pack make it a powerhouse for performance-oriented users. Its lag-free software and clean interface add to the allure. The OnePlus 11R feels premium in hand with a balanced heft, and the iconic Alert Slider makes a welcome return. This tastefully designed device deserves our wholehearted recommendation.
