

oomph in the bass region. The mids are reproduced beautifully; vocals sound crystal clear no matter the song. The highs have a sharp roll off but the timbre and clarity are good.

Overall, while these are not the best-sounding pair of earphones in the premium TWS segment – they don't give you too much to complain about, especially if your primary use case is usage during exercise. However, if sound quality is what you're going for; something more tuned to audiophile ears in the commercial space would be the Sony WF-1000XM5 or even the cheaper OPPO Enco X2.

As for microphone performance, you get an array of six MEMS microphones that relay the speaker's voice with impressive clarity. Be it indoors or outdoors, I had no qualms with the microphone performance of the Jabra Elite 8 Active.

JABRA ELITE 8 ACTIVE REVIEW: BATTERY LIFE

The battery life of the Jabra Elite 8 Active is one of the best in the industry. The numbers are ridiculous, and these are the charge-them-and-forget-them

kind of earphones we are hoping to see more of in the coming months. Without ANC turned on, the earphones last 14 hours on a single charge! With the charging case, you get a whopping 56 hours of battery life which equates to three extra charges.

With ANC turned on, you get about 8 hours of playtime on the earphones, as per Jabra. In our tests, the earphones lasted 7 hours and 42 minutes with ANC turned on and the volume set to 70 per cent. There's also Qi wireless charging and fast charging support. So, Jabra has hit the ball out of the park when it comes to battery life.

SHOULD YOU BUY THE JABRA ELITE 8 ACTIVE?

The Jabra Elite 8 Active are one of the best, if not the best, pair of workout earbuds you can get your hands on today. That cannot be doubted – it is impossibly durable, has an IP68 dust and water resistance rating, and a solid fit. But it is also so much more.

The Jabra Elite 8 Active's well-rounded sound signature, its impressive feature set and path-breaking battery life make it an easy recommenda-

tion for just about anyone. The lack of high-quality codecs such as aptX or LDAC does hurt it a bit – which is why we probably won't recommend these to audiophiles. For the rest, this is right there with the heavyweights of the premium TWS industry.
