

CAMERA

The Redmi 13C 5G is equipped with a dual camera setup on the back. This includes a 50-megapixel primary camera and a VGA sensor. On the front, there is a 5-megapixel selfie shooter.

The 5-megapixel sensor captures vibrant and detailed pictures, without overly smoothing the skin. However, it faces challenges in low-light conditions, which impacts the image quality of selfies. On a positive note, the front camera performs very well in portrait mode for a smartphone in this price range.

To the main camera now. The Redmi 13C 5G has visible noise in its pictures. In well-lit environments, it tends to capture highly saturated images. Because of this, the pictures have an orangish or pinkish cast. Furthermore, the pictures I clicked on the phone felt somewhat dull. Despite these limitations, I'd say that the camera is functional, albeit with room for improvement.

I enjoyed the portrait mode on this smartphone. Its capability to detect edges and delicately blur the background is quite impressive for its price range. Surprisingly, it achieves a good depth of blur even without a dedicated depth sensor. However, there are instances where edge detection falters, leading to blurred edges in a few portrait shots. Although this issue is infrequent, it should be noted.

In terms of low-light photography, the Redmi 13C 5G falls short, which is understandable in this price segment.

It struggles in low-light conditions and smoothens pictures excessively. However, the 'Night Mode' does provide a decent workaround when there's a small amount of light at night. Be cautious though as it tends to temper with colours and exposure. The same holds for the portrait mode in low light too, making it challenging to capture high-quality portraits.

In conclusion, the Redmi 13C 5G's main camera needs some improvement. Whereas, the front camera performed well for the price.

BATTERY

Speaking of its battery, the Redmi 13C 5G packs a 5000mAh battery that supports up to 18-watt fast charging. It has a big enough battery to run for up to 24 to 48 hours on a single charge (for basic usage, that is). However, while running demanding applications and games, the smartphone gave pretty mixed outcomes.

While playing Call of Duty: Mobile for 15 minutes on high graphics, the battery dropped by 3 percent which is great. The battery drop while using Maps and streaming high-quality videos is also doable. I used Google Maps for one hour and the battery dropped by 7 percent. Next, I streamed some videos from popular apps on the Redmi 13C 5G in high resolution, which is only HD+. I watched a HD+ video for 30 minutes and the battery saw a 6 percent drop.

I feel the battery of the Redmi 13C 5G is pretty good. This comes as no sur-

prise, as it is a key focus area for manufacturers when designing entry-level smartphones. One good thing is that the smartphone does not heat up while running performance-centric tasks, which also helps in extending mileage.

CONCLUSION

In summary, the Redmi 13C 5G is impressive for its improvements this year. The biggest of them is the first 'C' series phone with 5G at a budget-friendly price of around ₹10,000. The starry design gives it a cool look for fans of space themes. The glass back and the screen's responsive 90Hz refresh rate make it attractive. The MediaTek Dimensity 6100+ also works fine with the smartphone, even for games. Yet, the MIUI 14 software has too many extra apps and ads. The camera is okay but could be better, and the 5000mAh battery lasts a good amount of time.

—Mustafa Khan

SPECIFICATIONS

CPU: MediaTek Dimensity 6100+ (2 performance cores at 2.2GHz, 6 efficiency cores at 2.0GHz) | RAM: Up to 6GB | Storage: Up to 256GB | Display: 6.74-inch IPS LCD, HD+ resolution, 90Hz refresh rate | Camera: Rear: 50-megapixel primary camera, VGA sensor, Front: 5-megapixel selfie shooter | Battery: 5000mAh, 18-watt fast charging | OS: Android 13-based MIUI 14 | Design: Glass back panel, plastic mid-frame, three color options (Startrail Silver, Startrail Green, Starlight Black), starry design, dual camera setup, 3.5 mm headphone jack | Software: MIUI 14
