

BEST PHONES WITH OPTICAL ZOOM CAMERAS IN 2024

Here are some of the best phones you can pick from.

Samsung Galaxy S23 Ultra

Samsung Galaxy S23 Ultra (review) is one of the best zoom camera phones around. The primary telephoto camera on the Samsung Galaxy S23 Ultra uses a 10MP sensor and a 230mm equivalent periscope lens. This telephoto camera also supports auto-focus and OIS for additional stabilisation. The new Galaxy S24 Ultra surprisingly replaces the 10MP Periscope camera with a regular 50MP 5X optical zoom camera that can shoot 8K videos.

Vivo X100 Pro

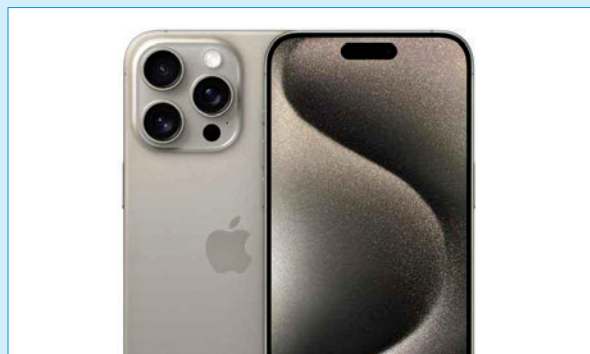

Vivo X100 Pro is the first smartphone to use a Zeiss APO-certified lens for the telephoto camera. The term "Apo" stands for apochromatic, indicating that the lens is designed to correct for chromatic aberrations. Chromatic aberrations are caused by the different wavelengths of light being refracted at

different angles as they pass through the camera lens and the resulting artefacts like colour fringing, distortion, etc are more prominent in telephoto cameras. In our review, we were quite impressed with the Telephoto camera performance of the Vivo X100 Pro. Of course, this is a fully loaded camera-centric flagship so there are a tonne of camera features to look forward to.

Apple iPhone 15 Pro Max

Apple iPhone 15 Pro Max is a great option if you are looking for a premium flagship with a great Telephoto camera for quality zoom images. It comes with 'Tetra-prism' technology which works on the same principle as a periscope zoom camera. The light reflects four

times within the Telephoto camera resulting in a longer path required for 5X optical zoom. This Tetra-prism periscope technology is exclusive to the iPhone 15 Pro Max and Apple may pass it on to regular Pro models in the next refresh that is slated for around September 2024. As for the camera hardware, the 12MP Telephoto camera with a 120mm lens also benefits from Apple's 3D Sensor shift stabilization. The advanced image processing algorithms are handled by the 3nm process-based Apple A17 Pro chipset.

OnePlus 12

The fourth-gen Hasselblad camera on the OnePlus 12 includes a 70mm Periscope Telephoto camera with a 64MP sensor for 3X optical zoom and OIS. There is also a 50 MP primary camera with OIS and a 48MP ultra-wide shooter with auto-focus. This 2024 OnePlus flagship will also benefit from the advanced
