

AI AI EVERYWHERE

WHERE IS THE AI ROAD LEADING US TO?

Satvik Pandey | satvik@digit.in

A

I have been the talk of the town over the last year and a half. For most of us, it started with

Dall-E taking over headlines and then its text focussed cousin, Chat-GPT making in-roads with its writeups that were, to say the least, interesting. This was November 2022. Since then, it seems like a tsunami of AI has taken over the world. Even we caved in and decided to do an entire issue of the magazine in April 2023, calling it the “AI Issue”. And, to our surprise, that issue of the magazine was loved by everyone and even ended up selling out across the country. Most of the content in the magazine that month was generated by AI, and was surprisingly great. I mean, the magazine sold out. That was one of the ways we witnessed how powerful AI was at that time and the potential it held.

So, when the massive corporations got a hint of what Artificial Intelligence would be and how it would be impacting the world, they hopped on. And they did big time. Take the example of CES. Our Chief Editor, Soham Raninga went to the show this year and was astonished by the way AI was being talked about at the show. Commenting on the insane rise of AI in the world of consumer tech and

highlighting his experience at the show, he said, “Before the start of the show, all the invites that I got were about AI. And on the floor, it reflected to a large extent”. Not only him but also several other people who were there on the show floor had the same observation.

We have established that AI has gotten a lot of attention from manufacturers. And, as that tech makes its way into our hands, we are starting to figure out more ways than one to work with that tech. While the effects of AI are far-reaching, in this article, we will be looking at some of the key areas where companies have invested in AI, as well as

some key statistics and applications of AI. So, without further ado, let’s dive in and look at some of the most interesting ways in which AI has made in-roads in our lives, especially in education, art, agriculture, and consumer tech –

ABC WITH AI

When we talk about Chat GPT one of the first things that comes to mind is how students across the world have started using it to complete their assignments and un-ethically using it to pump up their grades in school. This has led to text-based generative AI being used and frowned upon by many people across
