

Tip #3

DALL-E within ChatGPT

Use DALL-E within ChatGPT to generate AI images

A I seems like the technological trend of the decade with companies running to seize the opportunity by creating their own generative AI models and those who already have one keep updating it with more and more features. OpenAI's ChatGPT is leading the race. Now it also allows users to generate images. How? Let us tell you. OpenAI has now integrated DALL-E, its flagship AI image generation tool, into ChatGPT. Subscribers will not have to leave ChatGPT now to generate an image. Just like you create text on ChatGPT by entering the prompts, you will also be able to generate images. Unfortunately,

the image generation feature is not available for everyone and you can only access it if you upgrade to ChatGPT Plus and get its subscription. But how do you use it? Let me tell you.

How to use DALL-E on ChatGPT on the web?

- **Step 1:** Go to ChatGPT and start a new chat.
- **Step 2:** Make sure that GPT 4 is selected.
- **Step 3:** Now just like you give a text prompt, say something along the lines of "generate an image of...", as your prompt.
- **Step 4:** ChatGPT will then generate an image for you which you can get altered by giving follow-up prompts.
- **Step 5:** Download the image.

How to use DALL-E on the ChatGPT App?

- **Step 1:** Open the ChatGPT app.
- **Step 2:** Make sure that you're using GPT 4.
- **Step 3:** Just like for the web, give a prompt along the lines of "generate an image of..."
- **Step 4:** Get the image altered with follow-up prompts if it doesn't work for you.
- **Step 5:** Download the image.

Using these simple steps you can use DALL-E on ChatGPT and generate images.

Tip #4

Connect your MacBook to a TV

Take what you can

A re you an avid Mac user? If yes, then today I am going to tell you how you can connect your MacBook to a bigger display in just 3 simple steps to enhance your viewing experience. Let's get started. You can use either of these three ways to connect your Mac to a TV.

Use a cable

Just find the right HDMI cable to connect with your TV. However, you will need a USB-C to HDMI adapter/cable or a USB-C

hub with an HDMI port if your MacBook just has Type-C ports.

Wirelessly connecting

Apple also allows you to wirelessly connect your MacBook to a TV using AirPlay. For this, you'll need a TV setup that allows

Apple AirPlay. Follow these steps:

- Make sure that your MacBook and TV are connected to the same WiFi.
- Now go to the Control Center and click on "Screen Mirroring".
- Now choose your TV from the list.
- Type in the 4-digit code shown on your TV and you're done.

Using Chromecast

If these two methods are not working for you, then you can even use Google Chrome's Cast. Follow these steps:

- Firstly, check to make sure that both your Mac and TV are connected to the same WiFi.
- Launch Google Chrome on your Mac.
- Next, just open the tab which you wish to display on the TV.
- Next, locate the three dots menu on the top right corner and click on it.
- Here, click on 'Save and Share' and then on 'Cast'. Select the TV and you are done.
