

Google at MWC 2024 made big AI-focused feature announcements

During the MWC, Google shared a plethora of new features across devices such as wearables, phones, and cars, most of which are AI-driven. Gemini AI has been at the centre of focus for a lot of the new features that Google has announced.

It includes the use of Gemini AI to craft messages, generate captions for images, summarise texts through AI for Android Auto, and also access passes on Wear OS.

Another feature that will roll out this week in its beta version only in the Eng-

lish language, for now, is that you will now be able to access Gemini AI within the Google Messages app. There's another feature for Android Auto that will read out summaries of long text messages and contextualise group chats.

Certain accessibility-related features were also discussed at the MWC 2024. The company is working to improve the Lookout app. This helps the visually impaired with stuff like documents, food labels, etc. Now, it will also generate captions for images that have missing or inaccurate captions or alt text with the help of AI. The Lens in Google Maps will also see a certain improvement. Users can point their phone's camera to something and the TalkBack feature will read information about places and signs.

There are a lot more features that Google has announced.

Energizer reveals phone with largest battery ever

Whenever we buy a new smartphone or any device for that matter, battery size does matter a lot, at least for me. Currently, 4,000-5,000 mAh smartphone batteries are the most sought-after and can even last you longer. But what if I told you that a new smartphone might drop soon in the market that could pack a 28,000 mAh battery? We can only imagine the size and weight of this smartphone. Avenir Telecom is working on an Android smartphone called the Energizer Hard Case P28K and it will pack a massive 28,000 mAh battery cell.

Xiaomi SU7 EV

Xiaomi has put its hands into the automobile industry. The Chinese brand has finally unveiled its first car at MWC 2024. This is an electric vehicle, namely the Xiaomi SU7. Unlike, Xiaomi's smartphones, this car is not a budget-friendly vehicle and aims to compete with Elon Musk's Tesla. By the looks of it, the car seems to blend McLaren and Porsche.

Samsung shows off their Galaxy Ring

During MWC 2024, Samsung unveiled the prototype of its upcoming Samsung Galaxy Ring. Even though smart rings are not very popular at the moment, they aren't a new concept. It is expected that in the coming future, smart rings will take over our smartwatches.
