ElevenLabs will enhance your Sora AI videos

While Sora caught everyone's attention from its capabilities, there's an important part that is missing: Audio. To fill that gap, ElevenLabs has unveiled an AI sound generator. ElevenLabs shared a brief video clip featuring AI-generated sound on X. <https://bit.ly/35J3W8F>

LinkedIn's conversation starter AI

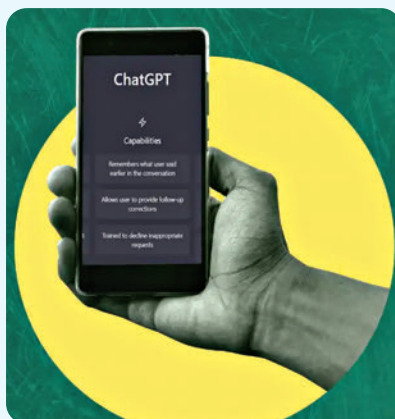

Emphasising the need for networking in today's day and age, LinkedIn has introduced a new messaging tool that is powered by AI. This tool will help users maintain a meaningful conversation more effortlessly. For this, the networking platform has reworked its "Network Tab." <https://bit.ly/49mIWM2>

ChatGPT adds 'Memory'

Currently, the Memory feature is in the testing phase and has been rolled out to limited accounts. It is said to recognise you and your preferences

—By Mustafa Khan

OpenAI is going big to enhance the ChatGPT experience better day-by-day. The AI company is actively working on its upcoming AI model, the GPT-5. Last year, OpenAI faced minimal AI competition. However, other tech companies like Microsoft and Google have also leveled up their AI game since then. Along with that, 2024 is also said to be all about AI. Considering this, OpenAI, which is among the first companies to roll out generative AI, has to come up with more advanced features this time. And guess what? OpenAI has already started it with the all-new 'Memory' feature for its AI chatbot.

This is the 'Memory' that works pretty much like cookies on websites. It is said to recognise you, your preferences, and everything you discuss with it. Previously, OpenAI CEO, Sam Altman said that he wants to make ChatGPT more personal.

Now with this new feature, it seems that ChatGPT could get more personal by remembering the communications.

The Memory feature is very useful for users who use ChatGPT daily. If you are working on a project that could take days, you don't have to log in every day and put all the information again and again. Once Memory is rolled out to every account, ChatGPT will memorise your inputs. Interestingly, this feature will be available for both free and ChatGPT Plus users.

Setting everything aside, I mentioned that Memory is pretty much like cookies. Well, this is not something everyone likes. Even I reject cookies on websites so that they don't collect my data. In a world of advanced AI, where many people are falling victim to data misuse, we don't want to take the risk. So, you can also turn off the Memory on ChatGPT. To do this, go to Settings > Personalization > Turn off Memory.

Currently, the Memory feature is in the testing phase and has been rolled out to limited accounts. It is expected that OpenAI will soon roll out this new feature to everyone. Till then, stay tuned! **[d]**
