

and two years of security updates with the Lava Storm 5G.

CAMERA

The Lava Storm 5G is equipped with a dual-camera setup, holding a 50-megapixel main camera and an 8-megapixel ultrawide lens. On the front, there is a 16-megapixel selfie shooter. Now, how good is the Lava Storm 5G's camera? Well, I must say it's nice but not good enough. Talking about its primary camera, this 50-megapixel sensor captures overexposed pictures. The saturation is too high in the pictures and they look vibrant. Although, not everyone minds vibrancy as some users opt for warm and colourful pictures, especially on budget smartphones. Along with that, the details it captures are not very satisfying. However, it was fine for me. Speaking of colours, its pictures look quite colourful but again, too bright and saturated.

Coming to its portrait mode, if you look closely, the edge detection is not impressive in the Lava Storm 5G. Although, the portrait shots look good if you don't zoom in. Moreover, the Lava Storm 5G can't be your go-to smart-

phone for night photography. Usually, you don't get a good low-light camera in budget smartphones and with this smartphone, it's the same. Furthermore, it also blurs the distant objects in Night Mode.

The 16-megapixel selfie shooter clicks colourful pictures, so colourful that I felt it has been overdone. However, I don't mind that and I feel that most of the budget smartphone users want their pictures to be bright and colourful.

BATTERY

The Lava Storm 5G is backed by a 5000mAh battery that supports 33-watt fast charging. The battery of this smartphone is also doable as I believe it can run for up to 48 hours on a single charge when performing basic operations.

If we do gaming or use Maps, here's the result: I played Call of Duty: Mobile for 15 minutes on the Storm 5G. In 15 minutes of gaming, the battery dropped by 6 percent. Furthermore, I watched an FHD+ video for 30 minutes and the drop was the same, 6 percent. However, one hour of Google Maps consumed 8 percent of the battery. In my opinion,

the battery optimisation in the Lava Storm 5G was quite impressive, and what's more impressive is that it didn't heat up much while running any of the battery tests.

VERDICT

To conclude, I feel that the Lava Storm 5G is a good budget smartphone offering an elegant design, responsive display, decent performance, and a good enough battery. The camera on this smartphone might not be top-notch but it makes the Lava Storm 5G a decent option when you look at its price point of ₹13,499. So if you are looking for a smartphone in the sub-15k category, the Lava Storm 5G is easy to recommend.

—Mustafa Khan

SPECIFICATIONS

6.78-inch 120Hz IPS LCD display with FHD+ resolution | MediaTek Dimensity 6080 processor paired with 8GB RAM and 128GB storage | Android 13 OS | 50MP main, 8MP Ultrawide, and 16MP selfie shooter | 5000mAh battery with 33-watt fast charging
