

Sennheiser Accentum Plus Headphones

Value-for-money audio performance under ₹20,000

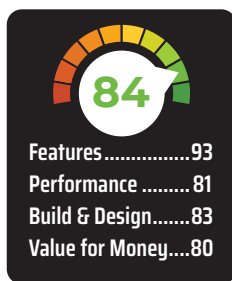

Sennheiser has been a brand that has been pivotal in the audio world for years now.

The German audio juggernaut may have shifted their focus to primarily professional audio, but their presence and impact in the consumer audio industry stands strong. Having produced some of the most iconic pair of headphones that we have come to know and love, they are still going strong, pushing out products that are class-leading. However, whenever a new product comes into the Digit Test Centre for a review, we don't let the stories attached to it, cloud our judgement. So, when the Sennheiser Accentum Wireless Plus Headphones showed up, I set all the lore aside, and put it through our rigorous testing process.

The world of consumer electronics has gotten highly competitive over the years and Sennheiser is not left out of the race. Despite having products that sound great and are loved by many, every new entrant in this battlefield needs to prove its mettle. The same was the case with the Accentum Plus wireless. In the brand's wireless line of headphones, they plug the gap between their budget HD series of headphones (which shares its name with the brand's professional headphone lineup), and their flagship Momentum 4 headphones.

Now, without further ado, let's hop into this review and see how the Sennheiser Accentum Plus Headphones fared in our tests –

₹15,990

BUILD AND DESIGN

The Sennheiser Accentum Plus headphones are a literal reflection of the philosophy - What ain't broke, don't fix it. And it reflects their approach towards the Accentum Wireless line of headphones.

Sennheiser got the design of their Momentum 4 Wireless Headphones right, and they stuck by it when making these headphones. They look elegant and thanks to their muted design, can be worn anywhere from a boardroom to a flight without any issues.

Now, before going any further, the usual PSA is mandatory. Everything that is related to audio is very subjective. So, please try them out before you buy them.

Coming back to the design, Sennheiser has maintained the design

of the Momentum 4, but cut corners on the material choice. You have a full plastic build, which, feels sturdy. I did our regular stress tests on these headphones and they were completely unfazed. The padding on the headband and the earcups is also soft and makes them comfortable to wear for longer periods of time. There is minimal sound leakage and the passive isolation is great, which in turn helps the ANC. The headband is adjustable and has a smooth sliding mechanism to allow for adjustments. The single, multi-function control button as well, is sturdy and has a nice clicky feel to it. These headphones are well built overall, and the choice of materials of cut down, does not affect their quality.

FEATURES

The Sennheiser Accentum Plus Headphones come with plenty of features. You have support for a variety of high-res CODECs including – SBC, AAC, aptX, aptX adaptive, mSBC, CVSD. You also get Adaptive Hybrid ANC, which we will talk about later, a feature-rich app, which makes customisation easy and simple. The app is called the Sennheiser Smart Control App and it allows for plenty of customisation options. The penta-band EQ allows you to tune the sound to your liking and has presets that will let you get a hold of different musical genres at the click of a button. You also have a bass boost mode. Bass-lovers take note.

The controls on these headphones are also easy to use. Both the touch-sensitive controls and the button are on the right ear cup, and are easy to get hold of and use in general. Sennheiser has done a great job here as well. However, I would have loved to have an additional button for ANC and transparent mode toggle. The reason is that integrating the ANC toggle in the power button makes it such that some of the beginner users of these headphones would often find themselves lost about how to work with that for their ANC and power switching. There is also pause when removed fea-
