

ture on these headphones. However, the sensor is only on the right earcup, which means that you will need to consciously remove that side of the earcup if you want to quickly pause the music and listen to something around you.

PERFORMANCE

With the Sennheiser Accentum Plus Headphones you get a fairly balanced sound signature, with subtle boost to the lows and the highs, giving a shallow U-shape. As you can see in the graph below, these headphones are fairly balanced sounding and with some tuning in the app, even the purists who prefer a flat-sounding pair of headphones, which are also our benchmark here at the Test Centre, would like this pair of headphones. That can be done using the customisable EQ that is baked into the app.

Out of the box, the sound might sound a bit bass-heavy to some people, with the lows rolling off into the mids. However, in my experience, these headphones sounded great with most genres of music. Even vocal heavy tracks like Rescue Me by OneRepublic, which tend to struggle because of the bass rollover, also sounded great. Be it the bassline on tracks like Uptown Funk or dense metal instruments in tracks like Selkies by BTBAM, everything you throw at these headphones, you can stay assured that they will handle it well.

Coming to the mic and ANC. Like some of the other headphones and TWS

earbuds that I have tested so far, the Sennheiser Accentum Plus Wireless Headphones perform great in closed and controlled environments. However, when exposed to challenging conditions, they struggle a bit. The mic does seem to not take the sound of traffic well, however, the ANC holds its own for the most part. For the price, both work well.

BATTERY LIFE

Coming to the battery life of these headphones, Sennheiser claims that they can last up to 50 hours on a single charge. When I put this to test, with ANC on and volume set to 50 per cent, which is around 75 db SPL, these headphones lasted for 45 hours. Forty five hours and 15 minutes to be precise. If you ever run out of battery, though, the brand has packed in fast charging into the Accentum Plus Wireless headphones. You can get upto three hours of playtime by charging these for 10 minutes using the USB cable that has been included in these headphones. You can also use them with your source by connecting them with the included 3.5 mm audio cable as well. However, the performance difference is very noticeable and the drop in volume made me strictly steer away from it.

VERDICT

With all that said, the question is, are these headphones the best in the mid-range? At Rs 15990, the Sennheiser Accentum Plus make for a great case for

themselves if you are looking for a pair of headphones that has a well rounded feature set and sounds great, with a great, lightweight build and design. However, if you are someone looking for the pureset sound out of a pair of headphones, then I would recommend the Sonic Lamb Headphones. They have a fairly flat sound signature. The bass might be something that you would need to look out for, because of the tech that they employ to reproduce it. You can read my full review of these headphones by clicking here. The Sonic Lamb headphones while putting up a strong competition against the Accentum Plus wireless, fall behind these headphones in terms of features. And, that is what might lead many to gravitate towards the Accentum Plus over the Sonic Lamb headphones.
