

HP Spectre x360 14

Does Intel Core Ultra 7 work well in a 2-in-1 Windows laptop?

In this HP Spectre x360 14 review I will

talk about improvements brought in by the new Intel Core Ultra 7 chip, the laptop's new design, and a lot of other important things. For instance, whether the 2-in-1 factor works well with the new chip or how's the thermal performance on the laptop. Now, for the uninitiated, the HP Spectre x360 14 is a 2-in-1 device, meaning it has a 360-degree hinge and a touch screen. As a result, the laptop can be used as a tablet, in tent mode or as a traditional laptop. This kind of flexibility is something which users appreciate and that's why the 2-in-1 form factor continues to exist.

The HP Spectre x360 14 is a premium laptop as well. From the packaging of the laptop to the materials used in its construction, the HP Spectre x360 14 exudes luxury. But, the main question remains – is it any good? Well, here's my HP Spectre x360 14 review which answers the same.

HP SPECTRE X360 14 REVIEW: DESIGN, PERFORMANCE, KEYBOARD AND I/O

In a similar spirit to what I said earlier, opulent is the word I'd use to describe the HP Spectre x360 14. My review unit came in a matte blue-ish finish that

we have seen in earlier models as well and it looks very good. One thing which the HP Spectre x360 14 does which gives it that unique look is gem-cut corners. These not only make the laptop stand out in a sea of boring-looking laptops but also give us a cool port placement.

The gem-cut corners include a Thunderbolt 4 port and a 3.5mm audio jack. The chassis edges have been refined for a more minimalist aesthetic. The build quality remains top-notch, with no bending, flexing, or twisting. The hinge mechanism works great and it easily holds whatever position you put it in. To enable that the hinge might feel as smooth as some competitors. Despite a large 14-inch display, the device maintains portability and offers more

screen real estate without significantly increasing size or weight.

The laptop's keyboard is also deserving of praise. It has bigger keys than a 14-inch MacBook Pro and also has good key travel. The keyboard is not a full-size one and in this form factor and category of laptop that is not even needed anyway. The power button and the fingerprint sensor share a single button and it is an unmarked one except for an LED light indicator which pops up when you press it. Although it adds to the minimalist appeal of the laptop, I think HP could have labelled this a bit better.

Now, I have to talk about the HP Spectre x360 14's touchpad because it has haptic feedback just like you'd find on MacBooks. The touchpad is bigger than the one on a 14-inch Apple MacBook Pro and also has a more pronounced and haptic feedback, even at its lowest setting. Overall, it is a great touchpad, it is accurate and easy to use.

Lastly, in terms of I/O ports, the HP Spectre x360 14 comes with a USB Type-A port two USB Type-C Thunderbolt 4 ports and a 3.5mm jack. Although the variety of I/O ports is similar to what you'd find in a similarly priced laptop, HP has gone one step ahead and included a Type-C dongle in the box with even more ports.

HP SPECTRE X360 14 REVIEW: DISPLAY AND SPEAKERS

The HP Spectre x360 14 comes with a 2.8k OLED display in a 16:10 aspect ratio. I love this form factor as it is the perfect combination of a 16:9 and a 3:2 aspect ratio. Allowing you to enjoy the best of entertainment while also showcasing a good amount of document information thanks to the increased height.

While testing, the brightness of the HP Spectre x360 14 came out to be 382 nits, which is slightly more than the recently launched 2024 ASUS Zenbook OLED, whose tested peak luminance is 367 nits. The HP laptop's sRGB colour space coverage is 100%, meanwhile, its DCI-P3 colour space coverage is 99%. The screen is also highly colour-
