

Infinix Y4 Max

Best Windows laptop under ₹35,000 in India?

₹33,990

Infinix is a brand which is well on its way to capturing the budget laptop segment in India and this Infinix Y4 Max Review proves the same. The laptop's base variant, which I tested and reviewed, is packed with so many good things that it is really surprising that you only need Rs 33,999 to buy one. The laptop's specifications aren't impossible in this price segment but it is all the other stuff like – build quality, I/O ports, keyboard, and display quality – that take home a ton of praise for the Infinix Y4 Max laptop, praise from me that is. So without wasting any more time, here's everything you need to know about the Infinix Y4 Max and whether it is a good laptop or not and who it is actually for.

INFINIX Y4 MAX BUILD QUALITY, DESIGN, KEYBOARD AND I/O

The Infinix Y4 Max's build quality is

one of the budget laptop's main highlights. It comes with an aluminium alloy chassis which is noteworthy. However, if you try and press the deck area, you will feel that it has some flex but it is very well contained and won't even announce its presence if you're deliberately pressing the deck area. It seems that the deck isn't made out of metal but that's alright because the Y4 Max is a fairly budget-oriented laptop and the plastic used also feels to be of high quality.

The Y4 Max's display hinge is solid and tight and you can't lift the lid with just a single hand. Getting this part right isn't easy, especially if you have a 16-inch metal top lid but I'd still prefer to use two hands to open the display instead of having a loose hinge. Infinix Y4 Max sits on four rubber legs and a group of 10 easy-to-remove screws that hold up the back plate.

Moving onto the keyboard it is something which Infinix has improved

upon quite a bit since several past generations. Therefore, the Y4 Max's keyboard, despite being part of a budget laptop, is better than many of its expensive cousins. For instance, the Infinix Y4 Max's keyboard easily beats out the one on the Zerobook Ultra, which costs almost twice as much. Even the trackpad is of a superior quality. It is big, smooth to touch and easy to click. In short, pretty great.

The Input-output port selection is also very decent featuring an HDMI 1.4, two USB Type-A ports, one Thunderbolt 4 Type-C port, a normal Type-C port, a 3.5mm jack slot and an SD card slot as well. The I/O feels complete and has all the essential ports one can expect in a budget Windows laptop.

INFINIX Y4 MAX REVIEW: SCREEN AND SPEAKERS

The Y4 Max's display is another thing that Infinix over-delivers on this laptop. Officially, the on-paper display brightness of Infinix Y4 Max is 300 nits. But in my testing, the peak SDR brightness came out to be 373 nits, which is a delightful surprise. However, the sRGB colour space coverage claims are a bit off. Y4 Max claims 83% sRGB colour space coverage. In reality though, the sRGB colour space coverage is 80%. Lastly, the Y4 Max's display has 60.8% DCI-P3 coverage as well.

As I mentioned before, the screen is a 16-inch unit with a 16:10 aspect ratio and this combination makes the display look quite massive. You will also find the Y4 Max's screen to have good viewing angles and an anti-glare coating too. The screen's refresh rate is only limited to 60Hz and I think it is appropriate at this price point.

The speakers on the other hand are loud. You can easily hear them even in a crowded office room. But the bass is almost non-existent. Infinix did make use of more room available in the 16-inch laptop with louder speakers but wasn't able to provide them with the necessary "oomph." In summary, good enough speakers but not for music enthusiasts.
