

OnePlus 12 series: everything you need to know

Ishita Grover, Director of Marketing, OnePlus India says 'Performance is Key' in the latest devices

Dhriti Datta | dhriti@digit.in

Digit: What are the three pillars that are most important for OnePlus in their flagship and high-end products?

OnePlus: At the core of OnePlus's flagship and high-end products lie three essential pillars that define our commitment to excellence: performance, design and build quality, and user experience.

Performance is a key focus for OnePlus, as we strive to deliver top-notch performance in our flagship and high-end devices. This involves equipping our devices with powerful hardware specifications, including cutting-edge processors, ample RAM, and fast storage options. Additionally, OnePlus prioritizes software optimizations to ensure smooth and responsive user experiences, whether users are gaming, multitasking, or engaging in everyday tasks.

Design and build quality are also significant considerations. At OnePlus we place a strong emphasis on creating sleek and premium-looking devices that feel premium in the hand. This involves attention to detail in materials, finishes, and construction techniques. By prioritizing design and build quality, OnePlus aims to offer devices that not only look great but also feel durable and well-crafted.

Furthermore, we are committed to providing a superior user experience across its flagship and high-end products. This encompasses various aspects such as intuitive software interfaces, fluid

navigation, fast and responsive displays, and thoughtful features that enhance productivity and convenience for users. Additionally, with the community at the forefront, we often incorporate user feedback into our product development process to continuously improve the overall user experience.

Digit: The OnePlus 12 and 12R impressed in the display and battery departments. What are some of the lesser-known newer innovations and technologies that made the 12 series' display and battery one of the best in the segment?

OnePlus: The OnePlus 12 and 12R are outstanding for their performance in the

competitive smartphone market, particularly in display and battery prowess. While their display and battery capabilities are impressive, several lesser-known innovations and technologies contribute to their excellence.

Starting with top-of-the-line hardware specs and industry-leading software technologies, the OnePlus 12 series is powered by the Snapdragon® 8 Gen 3 Mobile Platform and supported by the proprietary Trinity Engine. This advanced platform aims to provide a consistent, fast, and smooth experience in various usage scenarios, including heavy-duty tasks, multitasking, and gaming.

To address the challenge of balancing high performance with sustainable battery life, OnePlus collaborated closely with Qualcomm to optimize the OnePlus 12 for efficiency. Significant advancements were made in our in-house CPU-Vitalization technology, ensuring top-level performance with extended battery life by accurately managing CPU frequency and energy consumption. The OnePlus 12 introduces the industry-leading Dual Cryo-velocity VC cooling power system to manage the substantial power requirements of the Snapdragon® 8 Gen 3 and the ultra-bright display. This innovative cooling system, featuring a dual VC design and a redesigned micron-level 3D capillary dissipation structure, ensures efficient heat dissipation without compromising on charging speed or temperature control.

In terms of display performance, the OnePlus 12 boasts a peak brightness of 4500 nits and features 2160Hz PWM dimming for eye protection. The AI Intelligent Auto Brightness feature adapts to user behaviour, providing optimal brightness for any scenario and earning the TUV Rheinland Intelligent Eye Care certification. **d**
