iPhone 16 could feature Siri 2.0

Like in most cases, Apple seems to be late to the AI party. However, the California-based tech company seems to be making up for the lost time by pulling its socks up. There has been news all around about Apple's work in the direction of AI to stand. CEO Tim Cook had previously informed his

investors that Apple would soon make a significant announcement in the space of AI. No official revelation has been made but some Apple researchers have informed that Apple's MM1 AI model is in the works. There could also be Siri 2.0 which would have a lot of AI capabilities. <https://bit.ly/3TveAQH>

Motorola Edge 50 Pro to use Snapdragon 8 Gen 3

The Motorola Edge 50 Pro has been confirmed to launch in India. Along with confirming the smartphone, Motorola has also shared some specifications. The Motorola Edge 50 Pro will feature a curvy design with an IP68 rating. It will come in three Pantone colour options. On the back, there is a triple camera setup, holding a 50-megapixel main camera, a 13-megapixel Ultrawide lens, and an AI sensor. <https://bit.ly/3x3qo5k>

Qualcomm Snapdragon 8s Gen 3 to power affordable smartphones

Qualcomm is here with its latest offering, the Snapdragon 8s Gen 3 chipset, which is specifically built for the affordable flagship lineup of smartphones. With this new chipset, Qualcomm promises various high-quality features, including powerful AI capabilities, advanced connectivity, and top-notch sound quality. <https://bit.ly/4a2eg2V>

NVIDIA unveils 'world's most powerful' AI chip

NVIDIA has introduced the Blackwell platform, which will help organisations use AI more efficiently. With this platform, they can run large language models much faster and cheaper than before, saving energy along the way. "Powering a new era of computing, Nvidia announced that the NVIDIA Blackwell platform has arrived — enabling organisations everywhere to build and run real-time generative AI on trillion-parameter large language models at up to 25x less cost and energy consumption than its predecessor," the company announced in a press release on March 18th. <https://bit.ly/3TrFlpl>

India unveils EV policy to attract global giants

The Government of India has greenlit an EV policy, in an attempt to promote EV manufacturing within the country. This policy aims to provide incentives to big companies such as Tesla to establish manufacturing units within India. The government plans to change the country's EV atmosphere with this move. This policy states that companies that invest a minimum of USD 500 million in manufacturing facilities for EVs will receive duty concessions. <https://bit.ly/3x8lRPa>
