CHARTING THE COURSE OF AI INNOVATIONS FROM AROUND THE WORLD

[Must Reads]

NVIDIA's Project GROOT will help develop AI-powered robots

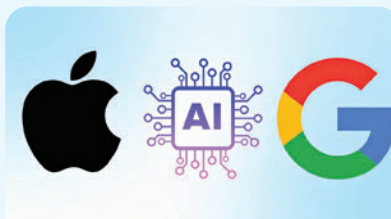

At the GTC conference, NVIDIA's Project GROOT. This is a pretty transformative initiative with which Nvidia plans on developing AI-powered robots. With nothing similar to Marvel's character, project GROOT or Generalist Robot 00 Technology will introduce a multimodal AI system designed to help the next generation of humanoid robots with advanced intelligence capabilities. Read along to get to know the whole deal. NVIDIA's Project GROOT is built on a general-purpose foundation model. This will enable humanoid robots to interpret text, speech, and videos, and even give live demonstrations to execute specific actions autonomously. The project has been developed with Nvidia's Isaac Robotic Platform tools that also includes the newly launched Isaac Lab for reinforcement learning. With NVIDIA's Project GROOT, the company aims to provide a helping hand to developers working on AI-driven robotics for a wide range of applications. In addition to this, the company also unveiled the Jetson Thor chip for humanoids. <https://bit.ly/3Pw7JFA>

YouTube creators now have to label AI-generated 'realistic' content

Generative AI has become a game-changing factor in the realm of content creation. AI-powered tools are streamlining workflows and unlocking unimaginable possibilities. Yet, as the boundaries between reality and simulation blur, a critical question arises: How can viewers discern between authentic content and AI-generated creations? YouTube really cares about being honest and clear with its users. That's why YouTube creators are now mandated to label AI-generated "realistic" content. <https://bit.ly/49Urw9X>

Apple could use Google Gemini to power iPhone's new AI

With all major smartphone companies being on top of their games, Apple doesn't want to stay behind. Apple is working on a new iOS update—iOS 18—and we hear on the grapevine that it is going to be the biggest update ever. Now, Apple is in talks to put Google's Gemini AI engine into the iPhones. According to people familiar with the situation, Apple and Google are discussing a deal to let Apple license Gemini, to power some new features coming to the iPhone software this year, reports Bloomberg. <https://bit.ly/4a7IEYG>
