Instagram could soon let you ‘Post to the past’

In today's digital world, connecting with friends and staying in the loop has become an important part of our daily lives. Meta-owned Instagram is one of the most used social networking platforms which helps us to stay connected with our friends, family and colleagues. Imagine being able to post that vacation photo you forgot to share or that hilarious

meme from last year, all with a simple backdate option. Well, soon you might just be able to do that! Instagram is reportedly preparing a feature called “Post to the past.” Alessandro Paluzzi, who discovers a lot of Instagram features before they are officially announced, has revealed that Instagram is working on a new feature called ‘Post to the past’.

Xiaomi removes popular MIUI feature

Xiaomi has removed a feature related to Google's video-streaming and sharing platform YouTube. This feature allowed devices operating on MIUI to continue playing audio from YouTube videos even with the screen off. WhatsApp's sticker creator available now

Earlier this year, WhatsApp announced that iOS users can now turn their photos into stickers and can edit existing stickers. Now, a report has revealed that WhatsApp is rolling out the ability to create stickers from pictures to some beta testers on Android. According to a report by WABetaInfo, Meta-owned WhatsApp is rolling out a new sticker editor feature to some beta users on Android. <https://bit.ly/3TLUaUY>

Google warns users about spam attacks

Google Drive, the widely used file storage and synchronisation service, has recently been targeted by a surge of spam attacks. In response to this concern, Google has issued a warning, urging Drive users to remain cautious and take necessary precautions. “Google Drive is aware of a recent wave of Spam attacks wherein the user receives a request to approve a suspicious file,” Google said in a post. <https://bit.ly/3VoPfw>

Chrome will offer real-time protection

To keep up with the increasing pace of hackers, Google has announced an important update to its Safe Browsing feature within Chrome, introducing real-time functionality. This update involves the system actively checking against Google's server-side list for increased security measures. Additionally, Google has introduced new password protections on Chrome for iOS as another way to help users safely navigate the web. <https://bit.ly/3Vodedj>
