

ZOTAC GeForce RTX 4080 SUPER Trinity Black Edition

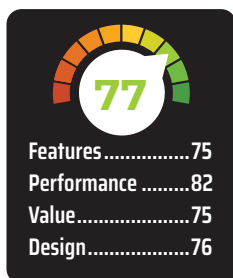

It's a polished RTX 4080

₹1,16,875

Excited to check out the replacement for the RTX 4080? We're in the same boat then! We received the ZOTAC GAMING GeForce RTX 4080 SUPER Trinity Black Edition 16GB GDDR6X Graphics Card and aside from the name being a mouthful, even the performance isn't something you'd ignore. We'd previously seen the RTX 4070 Super which ended up a pretty decent launch to begin with and had found its place in the stack at a suitable price point primarily thanks to the older RTX 4070 Ti being rendered end-of-life (EOL). It's the same case with the GeForce RTX 4080 Super because the RTX 4080 has also been retired.

That being said, we welcome this new GPU because it's a sign of a changing trendline with the prices. The RTX 4070 Super not only had more performance than the card it replaced but was also priced cheaper. With the RTX 4080 Super, we see the same thing. It was launched with a price of USD 999 (India price – INR 1,05,000) and

replaces the RTX 4080 which was launched at USD 1,199. That's a good USD 200 cheaper and with more performance. NVIDIA's fiscal earnings for the consumer GPUs announced in February 2023 had dropped by 46 per cent thanks to the nasty pricing for the high-end cards in the RTX 40 series and these new GPUs are a way of compensating for that. The consumer revenues are but a small portion of their overall revenues which are dominated by the data centre AI cards but it's still a lot of money. Thanks to the launch of the mainstream RTX 4060 and RTX 4060 Ti cards, their earnings from the consumer cards have recovered a come up to 2.49 billion and it's only bound to increase because the newly launched RTX 4070 Super, 4070 Ti Super and 4080 Super are priced much better. Although, it will be a while before we see the impact of these cards since they are enthusiast cards which sell very little compared to the mainstream cards but have higher margins. Nevertheless, we can now expect NVIDIA to price the RTX

50-series cards more sensibly. Vote with your wallets people!

SPECIFICATIONS

The RTX 4080 SUPER uses an AD103 GPU but I'd like to believe that it is not the absolute top-end variant since it also has the same 7 GPCs that the RTX 4080 had. It's just that there are more SMs that are functional on the GeForce RTX 4080 Super giving it a slight advantage over the RTX 4080. Speaking of SMs, the 4080 Super has 80 Streaming Multiprocessors and 10240 CUDA Cores. Its shader performance stands at 52 FLOPs which is 7.14 per cent higher than the RTX 4080. That's going to give a decent bump in synthetic benchmarks but when it comes to real-world gaming benchmarks, we're going to see a more muted difference. The 320 Tensor Cores with 836 AI TOPS make it a great card for making the most of AI-enhanced features in games and other AI-driven tasks. Since we've got 16 GB of GDDR6X memory on board, the card's AI-crunching capabilities can really be put to task. Then we've got 80 RT Cores, which over the 76 RT Core of the 4080, isn't going to lead to much difference.

So, you can see why the RTX 4080 no longer had a place, even from the perspective of the raw specifications. I doubt that we're going to see a big performance bump either. The RTX 4080 SUPER's boost clock of 2550 MHz is good to see but the memory clocks and bus width isn't that different from the RTX 4080 either. There's very little scope for the RTX 4080 Super to dramatically outperform the RTX 4080. If you were expecting the GeForce RTX 4080 Super to lie mid-way between the RTX 4080 and the RTX 4090, then you're in for a disappointment. It's not specced or priced that way. Essentially, we're looking at a polished RTX 4080.

PERFORMANCE

In 3DMark Time Spy, the RTX 4080 Super scores 27161, which puts it a little behind the RX 7900 XTX but well ahead of the 4070 Ti Super. Whereas, switching over to 3DMark Fire Strike turns the
