

tables and puts the RTX 4080 Super ahead of the 7900 XTX. Ramping up the benchmarks with Fire Strike Extreme and Fire Strike Ultra works in favour of the AMD flagship 7900 XTX thanks to its much larger memory buffer. And in Port Royal, the RTX 4080 Super maintains a significant lead over the 7900 XTX. We've recently added 3DMark's latest benchmark - Speed Way - to the list of synthetics and in that we see the RTX 4080 Super leapfrog over everything else.

Switching over to gaming performance in video games without RTX enabled. We see the RTX 4080 easily

get around 136 FPS in Assassin's Creed Valhalla, 270+ in Battlefield 2042, 117 in Cyberpunk 2077 and 292 in F1 2022. All of these FPS numbers are at 1440p resolution. In comparison, the RTX 4080 only scored about 1-2 per cent lower in all these games. So the RTX 4080 Super doesn't bring that much of a performance difference over the vanilla 4080.

The peak temperatures of the ZOTAC GeForce RTX 4080 Super are pretty good and in line with most of the AIC numbers we've seen. Peak temps were mostly hovering around 68 degrees Celsius during gaming. Only the intensive

synthetic benchmarks were able to take it up any further. Every card is hovering around 70 degrees Celsius under gaming load and the ZOTAC card is doing a good job here with its triple-fan cooling setup.

PRICE AND AVAILABILITY

The NVIDIA GeForce RTX 4080 Super is already available for sale. Some folks in mainland China have already procured retail samples of the card. Listings have already gone up on Indian retail stores earlier today. The ZOTAC GeForce RTX 4080 SUPER Trinity Black Edition is currently retailing for INR 1,16,875 which is one of the cheapest RTX 4080 Supers we've seen so far. The most expensive happens to be a white ROG Strix card from ASUS that's selling for INR 1,68,126. So the ZOTAC card that we have here is a pretty great buy. The suggested price for the RTX 4080 Super by NVIDIA is INR 1,05,000 and the ZOTAC card isn't exorbitantly priced at all. In fact, for the great warranty programme that ZOTAC has for their cards, this is totally great pricing.

VERDICT

Think of the GeForce RTX 4080 Super as simply an RTX 4080 with better pricing. There's honestly no reason to get any of the existing RTX 4080s in the market now that the 4080 Super is out. There are barely any performance gains with the RTX 4080 Super. We are looking at anywhere from 0.4 to 1.4 per cent improvement in performance over the RTX 4080 which is within the margin of error for a lot of consumers. At the end of the day, you're getting a slightly tweaked RTX 4080 with great pricing. What would really have been better was if this was based on the AD102 chip that the RTX 4090 is based on. That way, we'd have something more to talk about.
