

the ASAP Charging tech provides 180 minutes of playtime in just 10 minutes on charge which is pretty decent as well.

On top of all of that, the Immortal Katana Blade comes with something called Beast Mode which brings the latency down to 50ms which can help with gaming, not that it really needs it, because even without Beast Mode turned on, the latency was pretty low and there isn't really a noticeable difference when Beast Mode is turned on.

The Beast Mode can be activated using the touch-sensitive surfaces on the earbuds which can also be used to control the other basic operations like volume control, pause/play/next/previous music.

When it comes to the performance the boAt Immortal Katana Blade has a bass-biased and dark sound profile. It heavily emphasises the entire bass region of the frequency graph, which could cause some muddiness in the

sound. Furthermore, it has a dark sound profile.

For the uninitiated, a dark sound profile is one that follows a descending line – so the bass region is the most emphasised, the mids are emphasised a bit lesser, and treble has the least emphasis. This kind of sound profile can cause severe auditory masking, meaning the mids and highs will tend to get drowned out by the foreboding bass response.

This kind of sound profile usually only pairs well with dance, rap, and hip hop music. Classical or rock music could lose its essence due to the subdued mids and highs.

VERDICT

In conclusion, the boAt Immortal Katana Blade is sort of like the Burj Khalifa. You know, the tallest building in the world. It is awesome to look at and definitely has a WOW factor to it, but when it comes to practicality and

usability, it more or less falls short. (Fun fact- the Burj Khalifa is not connected to Dubai's Sewage system, so every day a few sewage trucks have to come and empty out the on-site sewage tanks to get rid of all the waste of the entire building complex). This is why we would recommend these earphones, only if you know you have fairly large ear canals and don't mind a fairly bass-heavy (almost overpowering) sound profile.
