

Lenovo Yoga Slim 7i

Best thin and light laptop under Rs 1 lakh?

Is the Lenovo Yoga Slim 7i the best thin and light laptop under Rs 1 lakh? Well, after spending more than a month with the Lenovo Yoga Slim 7i, I am convinced that it fills a very important gap in the Indian laptop market. I say this because recently Intel unveiled its magnum opus, the Core Ultra series, and from what I know about the new chips, after testing them in two of the most popular laptops in the Indian market, it sports some really good changes. However, getting your hands on the new Intel Core ultra series CPUs could potentially mean shelling out anywhere between Rs 1.3 to 1.6 lakh. This is the Lenovo Yoga Slim 7i review featuring the brand-new Intel Core 7 Ultra chip.

DESIGN, BUILD QUALITY, I/O, AND KEYBOARD

The Lenovo Yoga Slim 7i has a full metal body and according to their website, the brand is using a 50% recycled aluminium

bottom cover. The chassis feels strong with little to no flex and the entire surface is surprisingly fingerprint and smudge-free. I think the Luna Grey colours add to the fingerprint-resistant as well on top of giving the Yoga Slim 7i a very premium and minimalist look. At

the bottom, the laptop has two speaker vents and one large circular vent for air dissipation which is further aided by four very prominent rubberised features. You will also find speaker vents on either side of the keyboard, which I firmly believe greatly enhances the media consumption capabilities of the laptop.

Meanwhile, the I/O ports will serve almost your every need. You have one USB Type-A port, two USB Type-C thunderbolt ports, a 3.5mm audio jack, and an HDMI 2.1 slot. Along with these ports, the laptop also has a camera shutter slider and a power button. Considering how thin and small this laptop is, the port selection has everything barring an SD card reader.

The trackpad, on the other hand, isn't too big, it is smaller when compared to

some of the recent Intel Core Ultra-powered laptops I tested. What is noteworthy on this laptop though, is the keyboard. Lenovo is using a Dish keyboard which has slightly curved keys in the middle and a 1.5mm key travel. So what I am trying to say is that the Yoga Slim 7i has a great keyboard. The keys have good travel, as mentioned above, and a good spring action.

SCREEN AND SPEAKERS

One of the main highlights of the laptop is its 14-inch WUXGA OLED display. Now, WUXGA is just a fancy way of saying that the laptop has a 16:10 aspect ratio display instead of the 16:9 standard. In simpler words, the laptop has more height, an extra 120 lines of vertical resolution to be exact. So the resulting resolution isn't 1920 x 1080 but instead 1920 x 1200. Colloquially, people also refer to this as a 1200p display instead of a 1080p display.

In the Calman display test, the Yoga Slim 7i's display showcased a peak resolution of 301 nits. However, the actual perceived brightness of the screen looks relatively high. Mainly because an OLED display has per-pixel lighting, better viewing angles and superior colour saturation and contrast.

During the display test, the screen's sRGB and DCI-P3 colour space coverage came out to be 100% and 99%. Such a screen is great for general and professional usage. It offers all the possible colours while surfing the web or streaming a video and also while photo and video editing.

While the Yoga Slim 7i's display can showcase a wide variety of colours. It showcases them relatively less accurately compared to some of the other Core Ultra 7-powered laptops I tested earlier. However, those are fairly more expensive than the Slim 7i so it is understandable. Moreover, the Average Delta E value of 3.2 is also fairly decent. Lastly, the display features 10-bit

I also compared the Yoga Slim 7i's speaker system with that of my 14-inch M3 Max MacBook Pro, which is considered the benchmark in the 14-inch segment. Right off the bat, it is clear that the Yoga Slim 7i's speaker system has a smaller sound stage and less bass
