

POCO X6 Neo

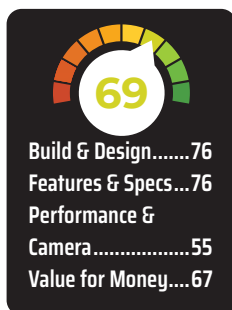

Well-designed phone with a solid display

POCO recently launched its POCO X6 series – including the POCO X6 5G and POCO X6 Pro 5G – to much fanfare. Now, POCO is bringing the youngest sibling of the trio to India. Priced at ₹15,999, the POCO X6 Neo contends in the cutthroat sub-₹20,000 segment to prove its mettle amidst tough competition. The phone packs the 6 nm MediaTek Dimensity 6080 chipset, an AMOLED display, and a 108 MP primary camera. POCO has also considerably trimmed the bezels to offer a better visual experience. However, phones such as the Lava Storm 5G, Motorola G54, and Realme 11x offer tough competition. Let's see if the POCO X6 Neo is a good proposition you could consider in this competitive landscape in my full POCO X6 Neo review.

BUILD AND DESIGN

The POCO X6 Neo is exceptionally well-designed for the price. Despite having a plastic build, the phone looks pretty impressive. Its slim 7.69 mm profile looks sleek and sophisticated. Additionally, the POCO X6 Neo is also quite lightweight at just 175 g. It's exceptionally comfortable to hold and the corners are rounded enough to ensure it doesn't dig into your palms. The company has also provided a premium-looking black case in the retail box.

If you choose to go caseless, most won't regret it since it looks quite eye-catching. I got the Martian Orange colour variant for review. The rear panel has a marble gradient effect that shines when light hits it – creating a cool ripple-like effect. It may be too garish for some, so the Black and Blue variants would suit those who like a more muted look.

The rear panel and frame have a matte finish ensuring no fingerprints or smudge marks mar the look of your phone. The large rectangular camera module has become a POCO staple now, but the effect could be more pronounced if it was a contrasting colour or simply black. There's a capacitive fingerprint sensor embedded on the power button which is quite speedy and accurate.

What's most impressive is the front of the phone – the bezels are super slim; some of the slimmest I've seen at this affordable price point. The display is topped by Gorilla Glass 5 and the phone comes packing an IP54 dust and water resistance rating. The IP rating is a good quality-of-life feature to have at this price that offers peace of mind in the long run.

DISPLAY

The POCO X6 Neo is quite a beast for content consumption. It is one

of the few phones in this price range that comes packing a large 6.67-inch AMOLED display. Add to that the slim bezels we previously talked about, and you've got yourself a stellar content-watching experience. Note that competing smartphones such as the Lava Storm 5G and Moto G54 feature IPS LCD displays, so the POCO X6 Neo has a clear leg up in this department.

The display comes with Full HD+ resolution, so everything looks pretty crisp for the price. The colours are a bit on the oversaturated side, but it isn't too jarring. It does support over one billion colours and a 100 per cent DCI-P3 colour gamut, making it a capable display in this price segment. The display has 120 Hz refresh rate support keeping things feeling super smooth when you're navigating the UI.

The display's rated peak brightness is 1,000 nits on HBM (High Brightness Mode) and in my testing, the reading hovered around the 935-940 nits mark, which is very close to the quoted numbers. The display also supports 2160 Hz instant touch sampling rate, so when you're gaming, your touches are registered within a jiffy.

There's no HDR support; quite common at this price but you do get to enjoy Widevine L1 support which allows you to watch HD content on streaming platforms. All in all, the POCO X6 Neo has one of the best displays on the market under ₹16,000 – a treat for those who use their smartphones as their primary content consumption device.

PERFORMANCE

The POCO X6 Neo is powered by the MediaTek Dimensity 6080 chipset. It features 8 or 12 GB of LPDDR4X RAM and 128 or 256 GB of UFS 2.2 storage. Graphics are handled by the Mali-G57 MC2. I found the performance to be pretty average for the price; it matches up to its competitors pretty evenly.

Kicking things off with benchmark numbers, the POCO X6 Neo scores 4,58,608 in AnTuTu v10. This pretty much lines up with the Lava Storm 5G's score which has the same processor.
