

just makes techies think of the Apple callback of ‘the most advanced iPhone yet’. I mean, sure Logitech, it’s fairly easy to claim to be the best at what you do if your benchmark is what you’ve already done. Well done. But does that mean it’s the best you’re capable of?

Software & Performance

The webcam is compatible with Logi Options+ as well as Logitech G Hub. At the time of writing this, we’ve barely tried out the MX Brio’s performance using Logitech’s software because of some technical issues we faced in setting it up; expect this section to be updated as we use the camera some more.

That said, the camera seems to perform as advertised, so far. The brand’s spent a lot of time talking about their new AI-enhanced performance, and it certainly is worth mentioning. The camera performs exceptionally well

when it comes to bad lighting situations. We tried the camera in a few different setups, testing its performance in terrible lighting, and you really need to go out of your way to make the subject’s face less visible.

The dual beamforming mics are also quite amazing. The background noise reduction isn’t foolproof and may not compare to professional grade mics that content creators have started using lately, but in a pinch, they’ll definitely get the job done.

What will the Logitech MX Brio cost?

The webcam is available in two versions: The consumer-grade MX Brio and the MX Brio 705 for Business. Both versions are priced the same and have the same hardware. The only major change is in the software that the brand recommends using for either use case. With regard to

pricing, pricing for the MX Brio in India is ₹24,995, which is closer to the price of the product in the UK (219.99 GBP) but a far cry from their US\$199.99 price tag in the US. If you intend to buy this camera, you may want to keep that in mind.

The Bottomline

The MX Brio webcam is a sleek and refreshing take on its tried-and-tested predecessor. It makes for great eye candy, flaunts great hardware and brings together style and utility in a way that one has come to expect from a brand like Logitech. It’s a great webcam and a suitable successor to the current favourite among users. For people looking for a professional webcam, the ₹3,000-odd difference between the older model and this one makes the choice much easier - go for the new one. However, for people looking to upgrade from the older model, you may want to rethink that decision. **d**
