

which combines data from several pixels to provide a brighter and more detailed image.

In addition to the hardware improvements, we have also worked extensively on the Image Signal Processor (ISP). Our proprietary Nightscape mode uses intelligent multi-frame processing to reduce noise and enhance clarity in low-light shots. It does this by taking several photos at different exposures and then combining them into one optimal photo.

Moreover, our AI algorithms further assist in recognizing various scenes and optimizing settings accordingly for the best possible outcome. This includes adjusting color tones, brightness levels, and contrast to ensure good-quality low-light photography.

We believe these combined efforts on both the sensor and ISP front provide our users with an exceptional low-light photography experience. We are committed to continuous innovation in this area to deliver even better results in future devices.

Digit: The NARZO series by realme is quite popular in India. What steps are taken to ensure market retention?

Sky Li, Realme: At realme, we are committed to maintaining and growing our market share in India, especially with the popular NARZO series. We carry out regular market research and consumer surveys to better understand our Indian customers' changing needs and preferences. This allows us to design and build products that meet these specifications.

We constantly innovate and improve our technology to ensure the best customer experience possible. We also strive to offer high-quality smartphones at competitive prices as our aim is to provide devices with top-notch features that are accessible to all segments of the market. NARZO 70 Pro 5G features a Horizon Glass design that provides a unique combination of smoothness and a matte finish within a single glass surface and is also the segment's first. Additionally features like the Air gesture controls and Rainwater Smart Touch

provides the customers with a more immersive software experience.

We have an extensive network of more than 700 service centers throughout India that provide swift and efficient after-sales servicing. This not only ensures consumer happiness, but also promotes trust and loyalty. Also, we constantly release software upgrades to improve device performance and provide new features. This ensures that our clients always receive the most recent and best user experience.

Digit: What is the target audience for the realme NARZO 70 Pro? Will onboarding popular Indian celebrity Shahid Kapoor help reach this market?

Sky Li, Realme: The realme NARZO 70 Pro is primarily aimed at youthful tech enthusiasts, particularly those seeking high-performance devices for photography, and multimedia consumption without sacrificing style or price. We acknowledge that today's youth are dynamic, aspiring, and constantly on the lookout for things that align with their lifestyle. The NARZO 70 Pro, with its powerful features and sleek Horizon glass design, is intended to appeal to this audience.

Onboarding popular Bollywood celebrity Shahid Kapoor as a product ambassador fits well with our strategy. Shahid, known for his versatility and charm, connects with a younger audience and has a large fan following throughout India. His affiliation with realme will undoubtedly help us reach and engage with our target demographic. We remain committed to delivering quality products and excellent customer service, which we believe are the key factors in reaching and retaining our target audience.

Digit: Is the realme NARZO 70 Pro camera tuned for colour accuracy or for instant shareability on social media? Please tell us more about the cameras.

Sky Li, Realme: NARZO 70 Pro 5G is the smoothest smartphone with

the best camera, with a 50MP Sony IMX890 sensor with OIS, the largest sensor in this price range, as well as 2X in-sensor zoom. It is ideal for taking bright, clean photographs for Nightscape. When combined with the processor's tremendous computational capacity, it performs lossless calculations (HDR synthesis and noise reduction) on the original image data, significantly improving picture clarity. Furthermore, it can keep more information and considerably improve highlight suppression capacity. When shooting night settings, it might reduce highlights while maintaining more black details, resulting in pure night images.

Digit: Can you tell us a bit about the design of the realme NARZO 70 Pro? What inspired it?

Sky Li, Realme: The NARZO 70 Pro offers a Horizon Glass design, which offers a unique combination of smoothness and matte finish inside a single glass surface. This glass goes through a high-end production process that improves both the tactile feel and the aesthetic attractiveness of the device. It has a remarkable Patchwork Design Glass, making it unique in the sector. The glass has a light transmission rate of 92%, ensuring clarity and textured appearance. It also feels smooth when held in your hand. The Horizon Glass design boasts a glass back, an asymmetrical circular camera module, and a premium metallic finish, all of which are unique to the market. Additionally, young consumers prefer glass designs over others. When it comes to mid range smartphones, 45% of them prioritize glass backs. The design looks naturally stunning and showcases a perfect precision symmetrical pattern.
