Redmi Pad SE vs Lenovo Tab M11: Best tablet under 20,000?

We are going to compare two budget tablets: Xiaomi Redmi Pad SE and Lenovo Tab M11. We are going to compare this based on its design, display, performance, camera, and battery to give you a wholesome view if you are looking to buy a tablet under 20K.

Speaking of the design first, you get a basic and clean design on both tablets. They are both pretty lightweight and easy to carry. They look almost pretty similar. And all the other stuff is just not too fancy. Not much jazz. Coming to the display now, you get an 11-inch IPS LCD on both tablets. Apart from that, both of these tablets offer the same 400 nits peak bright-

ness and a refresh rate of 90Hz. On the performance front, the Redmi Pad SE is powered by a Qualcomm Snapdragon 680 chipset paired with up to 8GB RAM and 256GB internal storage. The Lenovo Tab M11, on the other hand, runs on a MediaTek MT6769H Helio G88 chip coupled with up to 8GB RAM and 128GB internal storage. You get Android 13-based MIUI Pad 14 as

the OS on the Pad SE, whereas the Tab M11 runs on stock Android 13.

Performance-wise, the Pad SE is more powerful than the Tab M11. Overall, both tablets are not meant to deliver high performance as they are packed with budget-friendly configurations. Moreover, the Redmi Pad SE packs an 8,000 mAh battery. The Lenovo Tab M11, on the other hand, has a 7,040 mAh battery.

The Redmi Pad SE offers a single 8-megapixel camera but has a 1/4-inch sensor. It also has a 5-megapixel front-facing camera. Lenovo offers a 13-megapixel primary camera and a better 8-megapixel selfie shooter.

Apple's Let Loose event likely to unveil new iPads

Apple sent waves of excitement across the tech industry when it announced the "Let Loose" event scheduled for May 7 at 7:30 PM. The word on the internet is that this event could finally unveil the new iPad lineup.

It has been a while since Apple refreshed its iPad lineup. Apple could reveal a new entry-level iPad and the M2 iPad Pro. Apple could launch the OLED iPad Pro in two variants: 11-inch and 13-inch. The big change this year could be the repositioned selfie shooter. Instead of the traditional vertical positioning, Apple might position it horizontally for an improved video calling experience. We might also get to see a new iPad Air with a 12.9-inch

display option alongside the standard 10.9-inch models. It can sport Mini LED displays and can be powered by the advanced M3 chipset. In addition, Apple might also introduce Apple Pencil and a redesigned Magic Keyboard, which can have aluminium frames and an expanded trackpad. Even the event invite had an Apple pencil. The reason behind being confident about these rumours is

the fact that two iPad models have been spotted on India's BIS certification website. These went by the codenames of A2836 and A2837. Even Bloomberg's Mark Gurman said that this event can showcase "one of the biggest updates to the Apple tablet in a single day."
