WhatsApp could soon let you call unsaved contacts

WhatsApp, the popular messaging app, is reportedly preparing to introduce a groundbreaking feature. Imagine being able to call anyone on WhatsApp, even if their number isn't saved in your phonebook, directly from within the

app itself. According to a report by WABetaInfo, Meta-owned WhatsApp is working on an in-app dialer feature. This feature is expected to allow users to call contacts without saving their phone numbers in the address book. <https://bit.ly/3xZUDL1>

Android 15 could enhance phone usability for bedtime browsing

X Lots of people use their phones in bed at night, even though it's not great for their eyes. But Android has some helpful features to ease the strain, like a blue light filter and adaptive brightness. Some screens still can be too bright, though. Well, Android 15 could introduce a new feature to help solve this problem.

According to a report by Android Authority, Android 15 is expected to introduce a new feature called "even dimmer." Android already has an "extra dim" feature that dims the display by reducing bright colours. However, the new "even dimmer"

feature is expected to go even further in lowering the brightness beyond what "extra dim" does. The "even dimmer" feature is not currently visible in Android 15 Beta 1 but will likely be available under Settings > Display below the "adaptive brightness" setting. <https://bit.ly/44ovvtC>

TikTok ban bill signed by Joe Biden

TikTok, a Chinese app, was rolled out globally in September 2017, and now, after nearly five years, the app is facing challenges. TikTok has been a sensation worldwide, pioneering the 'reel' concept, now a hallmark of Meta's Instagram. However, in 2020, India banned TikTok and several other Chinese apps over national security concerns. Recently, the US government issued the TikTok ban bill. <https://bit.ly/3JDGNR9>

Meta Ray Ban smart glasses added WhatsApp video calling

Ever since Meta and Ray Ban collaborated on the Meta Ray Ban Smart Glasses, we have been resisting my urge to buy these pretty cool sunglasses. On the face of it, they are your basic sunglasses, but then they come with built-in speakers, a host of recording tech. But now they are even more with the addition of WhatsApp calling to the glasses. <https://bit.ly/4aXKDj0>

WhatsApp enables passkeys on iOS

iPhone users of WhatsApp will no longer have to deal with the hassle of SMS-based 2FA, as the Meta-owned instant messaging platform WhatsApp has announced that it is rolling out passkey support on iOS. For those who are unaware, WhatsApp rolled out passkey support on Android last year. You can use Touch ID, Face ID, or your device passcode to verify it's you with a passkey. When you register, you can use the passkey instead of an SMS. <https://bit.ly/3UFamrN>
