CHARTING THE COURSE OF AI INNOVATIONS FROM AROUND THE WORLD

[Must Reads]

iOS 18 AI features could utilise OpenAI technology

By now we all know that Apple is trying pretty hard to find a way into the AI race. It has been trying to strike a partnership or find a way so that it can include AI features in its upcoming iOS 18. For the uninitiated, currently, Apple stands last when it comes to incorporating AI features in its smartphones. Now, we hear reports suggest that Apple is trying to change that by finding a way to strike a deal with OpenAI. Read the story for more details. We had previously heard that Apple was in talks with OpenAI to incorporate AI features in iOS 18. However, those dialogues were not very successful and nothing fruitful was known. Now, it seems like the two companies have started to discuss matters again. We previously also reported that Apple was in touch with Google to license its Gemini chatbot. It seems like Apple hasn't made a final decision yet about who will make it to the upcoming iOS 18.

Google expands Gemini AI to older Android phones

"Google released its AI-powered experience, Gemini, to Android devices earlier this year. Initially, it was only compatible with Android 12 and higher. However, Google has recently expanded Gemini's support to include Android 10 and Android 11 as well. Gemini is now available for installation on Android 10 and higher through the latest app updates. This expands its compatibility beyond Android 12, lowering the minimum requirement, reports 9To5Google." <https://bit.ly/3xYOn6e>

Google's AI-powered 'Speaking practice' feature will enhance your English skills

Do you ever wish you could practise speaking English more easily? Google is on the verge of making that wish come true with its upcoming feature—Speaking practice. Powered by AI, this tool promises to revolutionise the way you improve your English skills.. <https://bit.ly/3y7LYGb>
