

HP Envy x360 14

A Value For Money 2-in-1 Laptop

₹1,07,999

In this HP Envy x360 14 review I will talk

in-depth about how HP has taken the 2-in-1 form factor and has made it into a high value for money proposition. The HP Envy x360 14 sees a major refresh from last year. Sporting a new design and processor, all at a great value for the price, the HP Envy x360 14 might just establish itself as one of the best 2-in-1 thin and light laptops this year.

BUILD QUALITY, DESIGN, KEYBOARD AND I/O

The HP Envy x360 14 sports a 17.5mm thick chassis which weighs around 1.44kg. The laptop's edges look more rounded this time around and as a result, the machine feels very easy to hold and work on. Your wrists will also feel comfortable during long typing sessions because of this. In terms of build quality, the laptop feels very solid and kind of like a machine that's built to last.

The deck area hardly has any flex, the display hinge is also tight and the 360-degree rotation is very smooth as well. The display has very thin side bezels but a relatively thicker chin and top area. However, as I will explain in my video, the viewing experience remains

independent of these things.

The laptop also has a matte coating all around it, which makes it very hard for smudges to appear. However, a scratch on a matte surface will stick out like a sore thumb. The overall look of the laptop feels very premium and the dark purple colour, which my review unit had, made it look very up market. Everything else, like the "HP" branding on the laptop's lid and the word "ENVY" written on one of the hinges to the Intel Evo logo looks very well throughout and goes well with the theme HP is going for.

The keyboard features darker atmospheric blue opaque keys with full-keyboard backlighting, with multiple levels of illumination. HP hasn't mentioned

the key travel but it is decent enough. Although, the keyboard's spring action could have been better. Apart from that, it feels like a really solid laptop keyboard. HP calls it touchpad – the HP Imagepad – but regardless it works well and can easily enable you to work without a mouse for longer sessions.

The HP Envy x360 14 comes equipped with a comprehensive range of input and output ports. It features two USB Type-C ports, which support a 10Gbps signalling rate, USB Power Delivery, DisplayPort 1.4a, and HP Sleep and Charge functionality. Additionally, there is one USB Type-A port with a 10Gbps signalling rate that also supports HP Sleep and Charge, alongside another USB Type-A port with the same signalling rate. For audio connectivity, it includes a headphone/microphone combo jack. The laptop also offers an HDMI 2.1 port for up to 8k 60Hz video output.

The HP Envy x360 14 features a 5MP IR (Infrared) camera equipped with temporal noise reduction. It also integrates dual array digital microphones, enhancing the quality of video calls and recordings by reducing background noise and improving voice clarity.

SCREEN AND SPEAKER QUALITY

The screen of the HP Envy x360 14 is a 35.6 cm diagonal 2.8K (2880 x 1800) OLED multitouch-enabled display. It features a variable refresh rate of 48-120 Hz and a quick 0.2 ms response time. The display is designed with UWVA (Ultra-Wide Viewing Angle) technology, edge-to-edge glass, and micro-edge bezels, and it's protected by Corning Gorilla Glass. As per official claims, it has a brightness of up to 400 nits in SDR (Standard Dynamic Range) and 500 nits in HDR (High Dynamic Range), with a colour gamut of 100% DCI-P3, providing vibrant colours and deep blacks for an immersive viewing experience. However, in our tests, the peak brightness came out to be 386.7 nits. The 100% DCI-P3 colour space coverage is as promised by HP. Moreover, the screen has a Delta E value, the lower the better,
