

Multi Core tests as well. However, the Motorola G54 does edge out the P1 slightly in PCMark Work.

In GPU benchmarks, the Realme P1's scores far exceed the POCO X6 Neo and Motorola G54's scores. I ran the 3D Mark Wild Life test as well as the Aztec Ruins, Car Chase, and Manhattan 3.1 tests in GFXBench. Furthermore, the Realme P1 does all of this without throttling too much; it only throttled to 92 per cent in its peak performance when running the CPU Throttling Test for 15 minutes.

In real-world testing, the Realme P1 proved to be one of the fastest phones I've used to date under ₹16,000. The processor can handle any basic task you throw at it. It is also the best for gaming at this price point, providing a stable, lag-free experience on games such as BGMI and Call of Duty: Mobile at Medium graphics.

The phone's UI, however, is tainted with tons of bloatware including apps such as Finshell Pay, Agoda, Snapchat, and more. It runs Realme UI 5.0 based on Android 14 and the company has promised 2 generational Android OS updates, and three years of security updates, which is decent for the price but it's no Samsung, of course.

CAMERAS

The Realme P1 houses a 50 MP primary camera and a 2 MP B&W camera. For selfies, the phone has a 16 MP shooter. It is also one of the few phones under

₹16,000 to support 4K video recording from its rear camera.

Now, the primary camera has no OIS, so it is not the most reliable at clicking low-light shots. There are instances where it fails to focus in low light. Additionally, the lack of OIS also contributes to some soft photos in low-light conditions.

However, photos taken in daylight have surprisingly good detail detection and sharpness for the price. The dynamic range could be better though; highlights are generally overexposed. Portraits come out looking nice with decent edge detection and skin tones. Once again, the detail levels are impressive with the phone capturing the texture of human faces very well. The selfie camera clicks good photos in ideal lighting conditions, but low-light photos fail to impress.

BATTERY LIFE

The Realme P1 has fantastic battery life – it is one of the longest-lasting smartphones in the sub-₹20K price segment. So, if you want a phone with fantastic endurance, you should definitely consider the Realme P1. The phone features a 5,000 mAh battery with 45 W SUPERVOOC charging support. The charging is provided inside the retail box.

The phone consistently gave me 8-9 hours of screen-on time, which is great endurance for the price. One hour of using Google Maps only drains the bat-

tery by 6 per cent, which is fantastic. The phone also charges pretty rapidly. 30 minutes of charging will get you about 50 per cent battery, and a full charge takes about 67 minutes.

VERDICT

The Realme P1 has carved a niche for itself – it is the single, most powerful phone money can buy under ₹16,000 (₹15K if you have specific bank cards). The Realme P1 will be my default recommendation for gamers and pro-users who want a powerful phone without breaking the bank (for now). While power is its top priority, it's not a slouch in several other areas as well. The battery life is long-lasting, the AMOLED display and stereo speakers offer an immersive viewing experience, and the design is eye-catching. However, the excessive bloatware and subpar low-light photography do detract from the total experience. Still, at ₹15,000, there is no phone more powerful than the Realme P1.

–Dhriti Datta

SPECIFICATIONS

Processor: MediaTek Dimensity 7050 | GPU: Mali-G68 MC4 | RAM: 6/8 GB LPDDR4X | Storage: 128/256 GB UFS 3.1 | OS: Realme UI 5.0, Android 14 | Cameras: 50 MP + 2 MP | Selfie camera: 16 MP | Display: 6.67" AMOLED, FHD+, 120 Hz | Battery capacity: 5,000 mAh | Charging: 67 W | Weight: 188 g | Colours: Peacock Green, Phoenix Red
