

improvement in the overall quality of the sound. The tests that we ran were done without any EQ applied and ANC on. Presets in the app, like the bass boost, ensure that you are feeling the thump in your skull.

Coming to the ANC, once you nail the fit of the buds, you will notice that the passive isolation, coupled with the ANC, cancels out almost all the noise coming in between the mids and the lows. In the highs, the buds do let in some sound, but that is not something that will bother you a lot. In case of a sharp sound out of the blue, the buds will let in some of the noise; however, in day-to-day use, that will not bother you a lot.

Lastly, the microphones of the earbuds are the biggest point of concern. In every other department so far, there has been almost nothing to complain about. But, when it comes to the microphones, the buds struggle a bit, with high-noise situations being the ones holding them back. Your voice will sound clear in very noisy situations. However, we did notice that the amount of background noise that seeped in was higher than normal. That is something

that I expect Sennheiser to fix with a firmware update soon.

BATTERY LIFE

The rated battery life on the Sennheiser Momentum 4 TWS earbuds is 7.5 hours with ANC off and 7 hours with ANC on, and the case pushes the battery life of the buds to 30 hours. In

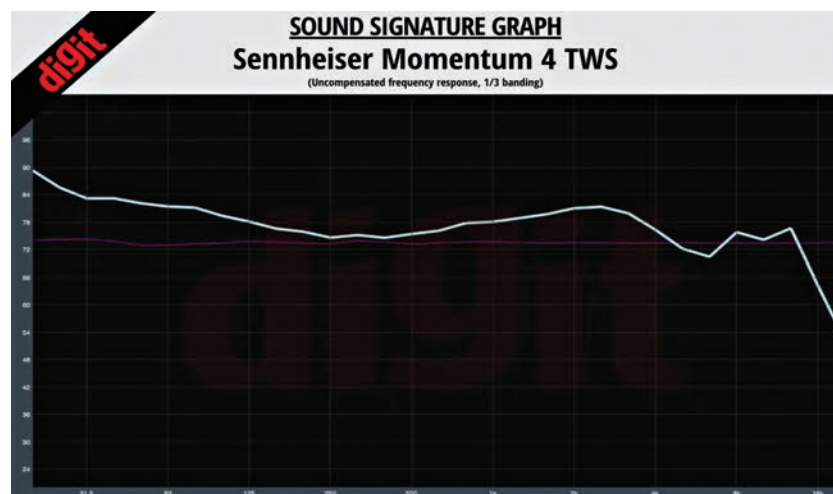

my testing, the battery of the buds came in at 6.5 hours with ANC on, AAC CODEC being used, and volume set to 50 per cent. Your mileage may vary depending on your settings. If you are running out of juice, then the battery of the buds can be topped off using the included USB-C cable or a Qi Certified wireless charger.

SHOULD YOU BUY THE SENNHEISER MOMENTUM 4 TWS?

The bottom line with the Sennheiser Momentum 4 TWS earbuds is – Go for it if you are in the Android ecosystem while considering the Sony WF-1000XM4, Sony WF-1000XM5, and the Bose QC Earbuds II. I would recommend you try all the earbuds out and see which ones fit the best because they come pretty close to each other in terms

of objective performance and value for money. The Sennheiser Momentum 4 TWS earbuds come with a solid set of features, performance, and build, which ensures that make a strong case for themselves in the high-end TWS market right now.
